Rings Of Continuous Functions:

Rings of Continuous Functions L. Gillman, M. Jerison, 2013-06-29 This book is addressed to those who know the meaning of each word in the title none is defined in the text The reader can estimate the knowledge required by looking at Chapter 0 he should not be discouraged however if he finds some of its material unfamiliar or the presentation rather hurried Our objective is a systematic study of the ring $C(X)$ of all real valued continuous functions on an arbitrary topological space X We are concerned with algebraic properties of $C(X)$ and its subring $C_b(X)$ of bounded functions and with the interplay between these properties and the topology of the space X on which the functions are defined Major emphasis is placed on the study of ideals especially maximal ideals and on their associated residue class rings Problems of extending continuous functions from a subspace to the entire space arise as a necessary adjunct to this study and are dealt with in considerable detail The contents of the book fall naturally into three parts The first comprising Chapters 1 through 5 and the beginning of Chapter 10 presents the fundamental aspects of the subject insofar as they can be discussed without introducing the Stone Cech compactification In Chapter 3 the study is reduced to the case of completely regular spaces

CMF in this area on a broad set of themes These proceedings reflect accurately we think the spirit of the conferees but it is not a faithful record of the papers presented at the conference
