ECOOP 2005 - Object-Oriented Programming Andrew Black, 2005-08-25 The 19th Annual Meeting of the European Conference on Object Oriented Programming ECOOP 2005 took place during the last week of July in Glasgow Scotland UK This volume includes the refereed technical papers presented at the conference and two invited papers It is traditional to preface a volume of proceedings such as this with a note that emphasizes the importance of the conference in its respective field Although such self evaluations should always be taken with a large grain of salt ECOOP is undisputedly the pre eminent conference on object orientation outside of the United States In its

turn object orientation is today's principal technology not only for programming but also for design analysis and specification of software systems. As a consequence ECOOP has expanded far beyond its roots in programming to encompass all of these areas of research which is why ECOOP has remained such an interesting conference. But ECOOP is more than an interesting conference. It is the nucleus of a technical and academic community, a community whose goals are the creation and dissemination of new knowledge. Chance meetings at ECOOP have helped to spawn collaborations that span the boundaries of our many subdisciplines, bring together researchers and practitioners cross cultures and reach from one side of the world to the other. The ubiquity of fast electronic communication has made maintaining these collaborations easier than we would have believed possible only a dozen years ago. But the role of conferences like ECOOP in establishing collaborations has not diminished.

Advances in Computer Science and IT Dil Hussain, 2009-12-01 The book presents some very interesting and excellent articles for this divergent title. It also covers topics which are combination of computer science and engineering such as meta computing, future mobiles, colour image analysis, relative representation and recognition and neural networks. The book will serve a unique purpose through these multi-disciplined topics to share different but interesting views on each of these topics.

Service Orchestration as Organization Malinda Kapuruge, Jun Han, Alan Colman, 2014-08-12 Service orchestration techniques combine the benefits of Service Oriented Architecture (SOA) and Business Process Management (BPM) to compose and coordinate distributed software services. On the other hand, Software as a Service (SaaS) is gaining popularity as a software delivery model through cloud platforms due to the many benefits to software vendors as well as their customers. Multi-tenancy which refers to the sharing of a single application instance across multiple customers or user groups called tenants is an essential characteristic of the SaaS model. Written in an easy to follow style with discussions supported by real world examples, Service Orchestration as Organization introduces a novel approach with associated language framework and tool support to show how service orchestration techniques can be used to engineer and deploy SaaS applications. Describes the benefits as well as the challenges of building adaptive multi-tenant software service applications using service orchestration techniques. Provides a thorough synopsis of the current state of the art including the advantages and drawbacks of the adaptation techniques available. Describes in detail how the underlying framework of the new approach has been implemented using available technologies such as business rules engines and web services.
