Polymer Interface And Adhesion:

Polymer Interface and Adhesion ,1982 **Adhesion Mechanism Between Metal and Polymer Interface** ,2003

The creping process is used to develop bulk stretch absorbency and softness in tissue paper Typically an adhesive material e g polyvinyl alcohol and polyamidoamine is used to attach paper on to the drum surface The severity of the creping process is dependent upon a number of factors including the adhesion between the adhesive and the metal surface of the Yankee Dryer Therefore the objective of this project is to understand the interaction mechanism between the adhesive and metal surface specifically with respect to acid base interactions in order to have better control in the creping process Using well characterized polymers and surfaces the role of surface energy of the polymer radius of gyration and chemical composition on adhesion has been investigated Through the use of microscopic and spectroscopic analyses of the surface chemistry at the polymer metal interface in conjunction with creping experiments the role of the chemical constituents in the microstructural and the physiochemical development of adhesion and the critical parameters for processing operations have been studied Acid base interactions between substrates and adhesives appear to affect surface wetting and the resulting adhesive bond strength Atomic force microscopy with chemically functionalized colloidal probes mounted on the end of the force sensing cantilever were used to study acid base interactions between adhesives and metal paper surfaces The probes used in our experiments were silica spheres decorated with mixed self assembled monolayers of hydroxyl and methyl terminated thiols Cast iron was used as the substrate Force vs distance curves recorded in air and in water showed that adhesive force depends strongly on the chemical functionality of the tip and the degree of acetylation of the intervening poly vinyl alcohol an adhesive used in paper creping These results suggest that adhesion forces in the paper creping process likely can be controlled through **Adhesion Mechanism Between Polymer and Metal Interface** Birol Üner,2002 Keywords creping polymer metal interface adhesion adhesive acid base interactions atomic force microscopy hydrogen bonding

Fundamentals of Ion-Irradiated Polymers Dietmar Fink,2013-03-14 Presented in two parts this first comprehensive overview addresses all aspects of energetic ion irradiation of polymers Earlier publications and review articles concentrated on selected topics only And the need for such a work has grown with the dramatic increase of research and applications such as in photoresists waveguides and medical dosimetry during the last decade The first part Fundamentals of Ion Irradiated Polymers covers the physical chemical and instrumental fundamentals treats the specific irradiation mechanisms of low and high energy ions including similarities and differences and details the potential for future technological application All the new findings are carefully analyzed and presented in a systematic way while open questions are identified The second volume Transport Processes in Ion Irradiated Polymers deals with transport processes in both unirradiated and irradiated polymers As both a review and a stimulus this work seeks to contribute substantially to the literature and advancement of polymeric devices from both the low and high energy regimes *Specialty Polymers and Materials* Shrikaant Kulkarni,Vasi

Shaikh, 2025-03-20 Specialty polymers are noted for their ability to retain valuable mechanical thermal and chemical characteristics when subjected to harsh environments such as high temperature high pressure and corrosive chemicals This new volume focuses on specialty polymers and polymer based materials in novel application areas discussing the synthesis and preparation methods the materials derived from them and how they are applied The volume touches on applications that vary from biomedical and defense to high performance coatings and smart materials for catalytic agricultural environmental and packaging applications Chapters explore the characteristic and distinct properties of specialty polymers such as biodegradability high performance smart behaviors and other distinct characteristics along with their diverse applications such as in oil fields focusing on carbon geo storage for agricultural uses of various polymeric nanocomposites for smart polymeric coatings and adhesives including edible polymers and their applications in the food packaging industry in biosensor design and more **Polymer Interfaces and Thin Films: Volume 710** Materials Research Society.

Meeting, 2002 Polymer interfaces are critical for many technological and industrial applications in thin films including microelectronics packaging automotive coatings and sensors The structure and architecture of interfaces in thin films and bulk polymeric systems can be exceedingly complex In thin films the technological drive to diminish film thickness while simultaneously enhancing homogeneity stability and adhesion is a demanding challenge driving research in newer areas of nanofilled and controlled nanostructured and nanopatterned materials Tailoring surface and interfacial properties is equally important for new developments in the traditional fields of bulk polymer blends adhesion and wetting There is a need to develop an understanding of interfacial phenomena with the ultimate goal of establishing structure property relationships with quantitative predictive capabilities and this book discusses these challenges Topics include block copolymer films theory simulations and dynamics polymer interfaces and thin films adhesion and mechanical properties self assembly by polymeric films self assembly and electronic properties lithographic electronic properties and nanoparticulate filled films Metallized Plastics 5&6: Fundamental and Applied Aspects Kash L. Mittal, 1998-10-22 This book chronicles the proceedings of the 5th and 6th symposia on Metallized Plastics Fundamental and Applied Aspects held in May 1996 and September 1997 respectively This volume contains 29 carefully reviewed revised and up dated papers which were presented at both symposia The book is divided in the following three parts Metallization Te *Fundamentals of Adhesion and Interfaces* Lawrence P Demajo, Donald S Rimai, Louis H Sharpe, 2000-10-31 The understanding of adhesion and interfacial effects has benefited from various technological advances in recent years Advances in laboratory equipment analytical tools such as the nanoindenter SIMS and ESCA and improvements in computing technology have greatly expanded the relevant body of knowledge Rapid progress in adhesion and interfacial science has made dissemination of results in a timely fashion more important than ever Accordingly the editors of this book organized an ACS symposium sponsored by the Division of Polymer Chemistry entitled Fundamentals of Adhesion and Interfaces The papers in this volume were selected from those presented at the symposium

Advances in Structural Adhesive Bonding David A. Dillard,2023-06-10 *Advances in Structural Adhesive Bonding* Second Edition reviews developments in adhesive bonding for a range of advanced structural engineering applications This new edition has been fully revised to include the latest advances in materials testing and modeling methods lifecycle considerations and industrial implementation Sections review advances in commonly used groups of structural adhesives covering epoxy acrylic anaerobic and cyanoacrylate polyurethane and silicone adhesives along with toughening Other chapters cover various types of adherends and pre treatment methods for structural materials including metals plastics composites wood and joint design and testing including topics such as fracture mechanics life prediction techniques and advanced testing methods This is a valuable guide for all those working with structural adhesives including those in an industrial setting adhesive specialists structural engineers design engineers R D professionals and scientists as well as academic researchers and advanced students in adhesives joining technology materials science and mechanical engineering Provides detailed coverage on the main adhesive groups including epoxy acrylic cyanoacrylate polyurethane and silicone adhesives Includes the latest developments across adherends pre treatment methods joint design and testing durability and lifecycle related issues Addresses environmental challenges adhesive specification quality control and risk mitigation for specific industrial application areas **Polymer Surfaces and Interfaces** Irina A. Starostina,Oleg V. Stoyanov,Rustam Ya Deberdeev,2014-05-20 This book presents the analysis of up to date techniques used for the determination of acid base properties in view of their applicability to examination of solid organic and inorganic surfaces The studies have been carried out by the authors since 1993 showing experimental data on surface properties of more than 150 polymers such as carbocatenary and heterochain polymers copolymers and their blends as well as different epoxy and rubber compositions used in adhesive joints The adhesive ability of metal polymer systems based on epoxy compositions polyolefins and rubbers was studied as a function of absolute difference in acid base properties of adhesive and adherends and the possibility to predict adhesive interaction on this basis was experimentally verified The book shows the important role that acid base interactions play in establishing interfacial adhesive adherent contact and outlines practical recommendations regarding parameters of quantitative estimation of acid base surface properties that implies the relationship with adhesive ability in polymer metal systems Creating polymeric materials with greater strength characteristics when in contact with metals is the most important problem when adhesive joints are designed The authors obtained experimental data for thermodynamic and acid base properties of about 200 organic and inorganic surfaces that find a wide practical application These results may be

used as a reference source to predict the adhesive ability of different coating systems The possibility to predict adhesive interaction of adhesive with adherend taking into account the absolute difference in their acidity and basicity was verified experimentally *Interfaces, Adhesion, and Processing in Polymer Systems* Spiros Haralambos Anastasiadis, Alamgir Karim, Gregory S. Ferguson, 2001 *Sub-critical Crack Growth Along Polymer Interfaces* Charavana Kumara Gurumurthy, 2000 *Polymer-Polymer Interfaces in Blends and Composites*, 1991 The principal focus of this research has been on improving adhesion at the polymer polymer interface in order to achieve useful polymer blends and certain composites Adhesion measurements were made on several systems to demonstrate that favorable enthalpic interactions between the segments of a block copolymer and a homopolymer substrate can improve their adhesion and that appropriate chemical reactions at the polymer polymer interface also promote adhesion These principles were used for developing polymer blends that are tough The matrix materials of the systems examined include polyamides styrene acrylonitrile copolymers styrene maleic anhydride copolymers etc Composites based on liquid crystalline polymers were examined briefly Gas transport properties in selective systems are also included A useful way for introducing chemical functionality for in situ reactions at the polymer polymer interface is to add a polymer having this functionality which is miscible with one of the components Several examples of such miscible systems were discovered and are reported here

Polymer Surfaces and Interfaces: Characterization, Modification and Application, 2023 Polymeric materials are used for a legion of applications in a wide array of technological areas and their proper surface interface characteristics are of cardinal importance for their applications Therefore the need to characterize polymer surfaces interfaces and their suitable modification to impart desired characteristics is quite patent This book chronicles the proceedings of the Symposium on Polymer Surfaces and Interfaces Characterization Modification and Application held as a part of the Society of Plastics Engineers Annual Technical Conference Boston May 7 11 1995 The articles in this book address many aspects of polymer surfaces and interfaces Topics covered include various ways chemical photochemical laser flame corona to modify polymer surfaces modification of contact lens surfaces various ways to analyze characterize polymer surfaces metal polymer interfaces metal polyimide adhesion metal self assembled organic monolayer interfaces polymer alignment layers for liquid crystals alignment of liquid crystal surfaces polyimide alignment layers molecular re orientation of polymer surfaces plasma polymerized organic coatings epoxy fiber interphase epoxy underfill materials for packaging integrated circuits transport in polymers polymer miscibility and cell adhesion
