Pomponius Melas Description Of The World:

Pomponius Mela's Description of the World Pomponius Mela, Frank E. Romer, 1998 The first modern translation of one of the world's earliest ethnographies

Classifying Christians Todd S. Berzon, 2021-05-25 Classifying Christians investigates late antique Christian heresiologies as ethnographies that catalogued and detailed the origins, rituals, doctrines, and customs of the heretics in explicitly polemical and theological terms. Oscillating between ancient ethnographic evidence and contemporary ethnographic writing, Todd S. Berzon argues that late antique heresiology shares an underlying logic with classical ethnography in the ancient Mediterranean world. By providing an account of heresiological writing from the second to fifth century, *Classifying Christians* embeds heresiology within the historical development of imperial forms of knowledge that have shaped western culture from antiquity to the present.

Chaucer and Italian Culture Helen Fulton, 2021-01-15 This study offers a clear discussion of canonical Chaucerian works. It includes new accounts of Italian cultural influences on Chaucer's writing. It has a contextualising introduction and comprehensive bibliography. It offers a comparative approach to key texts.

The Shape and Size of the Earth Dino Boccaletti, 2018-07-13 This book describes in detail the various theories on the shape of the Earth from classical antiquity to the present day and examines how measurements of its form and dimensions have evolved throughout this period. The origins of the notion of the sphericity of the Earth are explained, dating back to Eratosthenes and beyond, and detailed attention is paid to the struggle to establish key discoveries as part of the cultural heritage of humanity. In this context, the roles played by the Catholic Church and the philosophers of the Middle Ages are scrutinized. Later contributions by such luminaries as Richer, Newton, Clairaut, Maupertuis, and Delambre are thoroughly reviewed with exploration of the importance of mathematics in their geodetic enterprises. The culmination of progress in scientific research is the recognition that the reference figure is not a sphere but rather a geoid and that the Earth's shape is oblate. Today, satellite geodesy permits the solution of geodetic problems by means of precise measurements. Narrating this fascinating story from the very beginning not only casts light on our emerging understanding of the figure of the Earth but also offers profound insights into the broader evolution of human thought.

Encountering Water in Early Modern Europe and Beyond Lindsay Starkey, 2025-10-01 Both the Christian Bible and Aristotle's works suggest that water should entirely flood the earth. Though many ancient, medieval, and early modern Europeans relied on these works to understand and explore the relationships between water and earth, sixteenth-century Europeans, particularly, were especially concerned with why dry land existed. This book investigates why they were so interested in water's failure to submerge the earth when their predecessors had not been. Analyzing biblical commentaries as well as natural, philosophical, geographical, and cosmographical texts from these periods, Lindsay Starkey shows that European sea voyages to the southern hemisphere, combined with the traditional methods of European scholarship and religious reformations, led sixteenth-century Europeans to reinterpret water and earth's ontological and spatial relationships. The manner in which they did so also sheds light on how
