Aggregation and Representation of Preferences Andranick S. Tanguiane, 2012-12-06 Aggregation is the conjunction of information aimed at its compact representation Any time when the totality of data is described in terms of generalized indicators conventional counts typical representatives and characteristic dependences one directly or indirectly deals with aggregation It includes revealing the most significant characteristics and distinctive features quantitative and qualitative analysis As a result the information becomes adaptable for further processing and convenient for human perception Aggregation is widely used in economics statistics management planning system analysis and many other fields That is why aggregation is so important in data processing Aggregation of preferences is a particular case of the general problem of aggregation It arises in multicriteria decision making and collective choice when a set of alternatives has to be ordered with respect to contradicting criteria or various individual opinions However in spite of apparent similarity the problems of multicriteria decision making and collective choice are somewhat different Indeed an improvement in some specifications at the cost of worsening others is not the same as the satisfaction of interests of some individuals to the prejudice of the rest In the former case the reciprocal compensations are considered within a certain entirety in the latter we infringe upon the rights of independent individuals Moreover in multicriteria decision making one usually takes into account objective factors whereas in collective choice one has to compare subjective opinions which cannot be measured properly
