Maximal Orders Irving Reiner, 1975 **Selected Works of Maurice Auslander** Maurice Auslander, 1999 Auslander made contributions to many parts of algebra and this 2 volume set the set ISBN is 0 8218 0679 3 already published contains a selection of his main work **Maximal Orders Over Dedekind Rings** Alan McKean Shorb, 1965 Quaternion Orders, Quadratic Forms, and Shimura Curves Montserrat Alsina, Pilar Bayer i Isant, 2004 Shimura curves are a far reaching generalization of the classical modular curves They lie at the crossroads of many areas including complex analysis hyperbolic geometry algebraic geometry algebra and arithmetic This monograph presents Shimura curves from a theoretical and algorithmic perspective *Multiplicative Ideal Theory and Factorization Theory* Scott Chapman, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2016-07-29 This book consists of both expository and research articles solicited from speakers at the conference entitled Arithmetic and Ideal Theory of Rings and Semigroups held September 22 26 2014 at the University of Graz Graz Austria It reflects recent trends in multiplicative ideal theory and factorization theory and brings together for the first time in one volume both commutative and non commutative perspectives on these areas which have their roots in number theory commutative algebra and algebraic geometry Topics discussed include topological aspects in ring theory Pr fer domains of integer valued polynomials and their monadic submonoids and semigroup algebras It will be of interest to practitioners of mathematics and computer science and researchers in multiplicative ideal theory factorization theory number theory and algebraic geometry Methods in Ring Theory Freddy Van Oystaeyen, 2012-12-06 Proceedings of the NATO Advanced Study Institute Antwerp Belgium August 2 12 1983 *Quaternion Algebras* John Voight, 2021-06-28 This open access textbook presents a comprehensive treatment of the arithmetic theory of quaternion algebras and orders a subject with applications in diverse areas of mathematics Written to be accessible and approachable to the graduate student reader this text collects and synthesizes results from across the literature Numerous pathways offer explorations in many different directions while the unified treatment makes this book an essential reference for students and researchers alike Divided into five parts the book begins with a basic introduction to the noncommutative algebra underlying the theory of quaternion algebras over fields including the relationship to quadratic forms An in depth exploration of the arithmetic of quaternion algebras and orders follows The third part considers analytic aspects starting with zeta functions and then passing to an idelic approach offering a pathway from local to global that includes strong approximation Applications of unit groups of quaternion orders to hyperbolic geometry and low dimensional topology follow relating geometric and topological properties to arithmetic invariants Arithmetic geometry completes the volume including quaternionic aspects of modular forms supersingular elliptic curves and the moduli of QM abelian surfaces Quaternion Algebras encompasses a vast wealth of knowledge at the intersection of many fields Graduate students interested in algebra geometry and number theory will appreciate the many avenues and connections to be explored Instructors will find numerous options for constructing

introductory and advanced courses while researchers will value the all embracing treatment Readers are assumed to have some familiarity with algebraic number theory and commutative algebra as well as the fundamentals of linear algebra topology and complex analysis More advanced topics call upon additional background as noted though essential concepts and motivation are recapped throughout

The Arithmetics of Quadratic Jordan Algebras Michel L. Racine,1973 The first step in obtaining an arithmetic theory for finite dimensional quadratic Jordan algebras over the quotient field of a Dedekind ring is the determination of maximal orders This is the main concern of this paper Jordan analogues of some of the first theorems in classical associative arithmetic are obtained For special quadratic Jordan algebras the problem of determining maximal orders is reduced to arithmetic questions in quadratic forms and associative algebras with involution The number of isomorphism classes of maximal orders is computed for most central simple quadratic Jordan algebras over a local field In the process previous results of Knebusch are obtained in a uniform fashion and are extended to the case of algebras over fields of characteristic 2 and 3
