Managing Cover Crops Profitably

SECOND EDITION

Farmers across the U.S. are using cover crops to erode less, clean water and slow erosion. They find that cover crops help them cut costs and boost profits while improving their soil and protecting natural resources.

This book details findings from published studies and on-farm experiences with a scientifically informed tool for farmers and agricultural educators. You will find detailed information on how to select cover crops to fit your farm, and how to deal with them in crop rotation practices.

Here is what the experts say ...

"If you're like most farmers, you probably think cover crop has to cost more. By getting just a bit of the cover crop, you can build and improve your soil and farm. They can suppress weeds, clean water and take up excess nutrients. Just the combination of financial gains adds to all other benefits like to build and the soil is better and healthier. Cover crops make a big difference on my farm. They can do the water for you!"

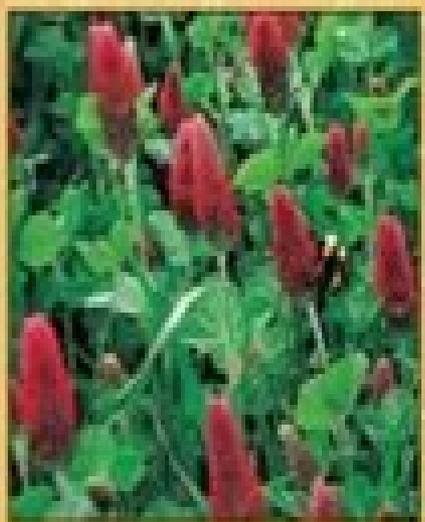

Richard DeWitt, vegetable grower Virginia, VA

"Farmers who use farmers and growers get the important detailed information they need to make their own decisions on integrating cover crops into crop rotation. Don't forget to read the addition, which contains farmer experiences with cover crops. This really is a one-of-a-kind resource!"

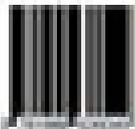

Traci Reynolds, extension specialist, North Carolina State University, Department of Crop Science

"This book will be a great resource for farmers, educators, researchers and anyone who wants basic information and good ideas for how to use cover crops. I am particularly impressed with the way information is supported by personal experiences of farmers and researchers."

John B. Swanton, research scientist, USDA ARS, Beltsville, MD
