Pattern Recognition Sergios Theodoridis, Konstantinos Koutroumbas, 2006-04-07 Pattern recognition is a fast growing area with applications in a widely diverse number of fields such as communications engineering bioinformatics data mining content based database retrieval to name but a few This new edition addresses and keeps pace with the most recent advancements in these and related areas This new edition also covers Data Mining which was not treated in the previous edition and is integrated with existing material in the book It includes new results on Learning Theory and Support Vector Machines that are at the forefront of today's research with a lot of interest both in academia and in applications oriented communities It for the first time treats audio along with image applications since in today's world the most advanced applications are treated in a unified way and the subject of classifier combinations is treated since this is a hot topic currently of interest in the pattern recognition community The latest results on support vector machines including v SVM's and their geometric interpretation Classifier combinations including the Boosting approach State of the art material for clustering algorithms

tailored for large data sets and or high dimensional data as required by applications such as web mining and bioinformatics
Coverage of diverse applications such as image analysis optical character recognition channel equalization speech
