Gobin, J.J.M Bierlaagh, 2012-12-06 Thirty years ago our attention was drawn to the alphabetical incomitances in strabismus As an elevation in adduction is the most frequent incomitance we decided to start treating these incomitances A weakening procedure of the inferior oblique muscle seemed indicated However since we wanted to prevent a torsional overcorrection with a head tilt we displaced the scleral insertion of the oblique muscle towards the equator of the globe This way the torsional action of the muscles is saved A weakening of the horizontal rectus muscles was systematically added making it a simultaneous horizontal and cyclovertical surgery Our way to deal with strabismus developed into a coherent entity and the interest of colleagues encouraged us to write it down We decided to publish a textbook with a theoretical and an extensive practical part Our approach is based on thirty years of exclusive strabological work half time academic and half time private practice More than 6500 results were analysed and the majority have been published The concerned publications are referred to at the end of the first chapter Private practice allowed to benefit from the fact that patients were operated on by the same surgeon and remained in personal contact during follow up *Diagnosis and Management of Ocular Motility Disorders* Alec M.
