Lambertini,Joseph W. Bull,Leroy Little Bear,Harvey Locke,Eva Zabey,Dorothy Maseke,Carlos Manuel Rodríguez,2025-06-02
As humanity sits at an existential crossroads this book introduces the need to build a nature positive future to secure the
functioning and stability of Earth systems essential to the survival and wellbeing of present and future human generations as
well as the rest of Earth s amazing diversity of life Alongside the change in climate a more silent but equally terrifying crisis
is unfolding the loss of nature and biodiversity These twin crises are in fact interconnected After decades of ignoring our
impacts on the natural world we are beginning to realise that nature conservation is a security issue for humanity and an
imperative for intersectional and intergenerational justice For these reasons we must embrace a transition from a nature
negative to a nature positive society one that ensures human development and addresses today s inequality while conserving
restoring and sustainably benefiting from nature s resources and services A Nature Positive future is one with more nature
than today more forests more fish more pollinators more soil biodiversity with benefits for the Planet and for us In this book
we define what becoming Nature Positive means from a variety of perspectives what it takes to deliver it and why it is
possible and most importantly necessary This book is essential reading for those concerned with conserving nature and
securing a safe future for humanity in the face of climate breakdown biodiversity loss and ecological collapse The future can
be bright The choice is ours Who Invented the Computer? Alice R. Burks,2010-10-29 In 1973 Federal District Judge Earl
R Larson issued a ruling in a patent case that was to have profound and long lasting implications for the dawning computer
revolution Against all expectations the judge ruled against Sperry Rand Corp which claimed to hold the patent on the first
computer dubbed the ENIAC and was demanding huge royalties on all electronic data processing sales by Honeywell Inc and
other large competitors The judge came to the conclusion that in fact the ENIAC was not the first computer but was a
derivative of an obscure computer called the ABC which had been developed in the late thirties by a largely unknown
professor of physics and mathematics at Iowa State University named John V Atanasoff Looking back today from our digital
world at what was then a little publicized trial it is clear that the judge s decision had enormous repercussions If Judge
Larson had ruled the other way in favor of the patent claim subsequent manufacturers of computing hardware would have
had to obtain a license from Sperry Rand and the course of computing history would likely have been very different from the

galloping revolution we have all witnessed in the past three decades This book centers on this crucial trial arguing that Judge Larson correctly evaluated the facts and made the right decision even though many in the computing community have never accepted Atanasoff as the legitimate inventor of the electronic computer With meticulous research Alice Rowe Burks examines both the trial and its aftermath presenting telling evidence in convincing and absorbing fashion and leaving no doubt about the actual originator of what has been called the greatest invention of the 20th century **Innovative Technologies and Learning** Yueh-Min Huang, Tânia Rocha, 2023-07-31 This book constitutes the refereed proceedings of the 6th International Conference on Innovative Technologies and Learning ICITL 2023 held in Porto Portugal during August 28 30 2023 The 64 full papers included in this book were carefully reviewed and selected from 147 submissions They cover a wide range of many different research topics such as artificial intelligence in education computational thinking in education design and framework of learning systems pedagogies to innovative technologies and learning STEM STEAM education VR AR MR XR in education and application and design of innovative learning software *Ocean Engineering Mechanics* Michael E. McCormick, 2010 This book is based on the author's experiences in engineering practice and in the classroom The introductory topics in wave mechanics and the presentation of such have their foundations in the courses taught at the U S Naval Academy The advanced topics have their origins in the postgraduate courses taught at the Johns Hopkins University
