Quadratic Assignment Problem Theory And Algorithms:

The Quadratic Assignment Problem E. Cela,2013-03-14 The quadratic assignment problem QAP was introduced in 1957 by Koopmans and Beckmann to model a plant location problem Since then the QAP has been object of numerous investigations by mathematicians computers scientists operations researchers and practitioners Nowadays the QAP is widely considered as a classical combinatorial optimization problem which is still attractive from many points of view In our opinion there are at least three main reasons which make the QAP a popular problem in combinatorial optimization First the number of real life problems which are mathematically modeled by QAPs has been continuously increasing and the variety of the fields they belong to is astonishing To recall just a restricted number among the applications of the QAP let us mention placement problems scheduling manufacturing VLSI design statistical data analysis and parallel and distributed computing Secondly a number of other well known combinatorial optimization problems can be formulated as QAPs Typical examples are the traveling salesman problem and a large number of optimization problems in graphs such as the maximum clique problem the graph partitioning problem and the minimum feedback arc set problem Finally from a computational point of view the QAP is a very difficult problem The QAP is not only NP hard and hard to approximate but it is also practically intractable it is generally considered as impossible to solve to optimality QAP instances of size larger than 20 within reasonable time limits
