

## 9. Quality Assurance Plans

A Quality Assurance Plan (QAP) is a written document, which presents, in specific terms, the policies, organization, objectives, functional activities, and specific QA and QC activities that are designed to achieve the objectives of the project (U.S. EPA 1980, U.S. EPA 1992b).

The QAP serves three main purposes. First, and most important, it is the culmination of the discussion and planning that went into designing the operation to produce results that are of the quality needed. Second, it is a historical record that documents the operation in terms of measurement methods used, calibration standards and frequencies planned, auditing planned, etc. Lastly, a QAP provides management with a document that can be used to assess whether the planned QA activities are being implemented, and to examine the importance of these activities toward the goal of quality data in terms of relative bias, precision error, and other indicators of quality.

The Agency's draft interim final requirements for Quality Assurance Project Plans for Environmental Data Operations (EPA QA/R-5, U.S. EPA 1992a) provides guidance regarding components of a QA Plan. This and other EPA QA guidance is being written using ANSI/ASQC guidance (ANSI/ASQC 1994a) as a framework. When EPA QA/R-5 becomes final, it will supersede previous Agency guidance (QAMS-005/80; U.S. EPA 1980). This guidance is intended for organizations that gather data on behalf of EPA through contracts, financial assistance agreements, and interagency agreements. Although most radon measurement organizations do not fall into this category, this section provides information regarding format and terminology from both the Agency's 1980 guidance and the draft interim final guidance.

There are 16 elements of a QAP that are described in EPA's guidance for preparing such plans (U.S. EPA 1980, U.S. EPA 1989). These elements are described here along with terminology used by other organizations. These elements should be present in a QAP, and presentation in the **order** described in this section will facilitate review by EPA and others (for example, by residential service providers). Exhibit 9-1 describes which elements are necessary for the QAPs of analytical and residential service providers.

Maier, B. Griepink, Ph. Quevauviller, 1995-01-13 Quality assurance QA for environmental analysis is a growing feature of the nineties as is illustrated by the number of QA guidelines and systems which are being implemented nowadays There is however often a huge gap between the implementation and respect of QA guidelines and the technical approach undertaken to improve and validate new analytical methods This is particularly true for complex determinations involving multi step methodologies such as those used in speciation and organic analyses Quality assurance may also be considered from the technical point of view which is the focus of this book The techniques used in different analytical fields inorganic speciation and organic analysis are critically reviewed i.e. discussion of advantages and limitations and existing tools for evaluating their performance are described e.g. interlaboratory studies use of certified reference materials Particular reference is made to the activities of the Measurements and Testing Programme BCR of the European Commission towards the improvement of quality control of environmental analysis The book has been written by experienced practitioners By its nature it serves as a practical reference for postgraduate students and environmental chemists who need a wide overview of the techniques used in environmental analysis and existing ways of evaluating the performance of relevant analytical methods The critical discussions of the methods described as well as the development of quality assurance aspects makes it unique **Quality Assurance in Environmental Monitoring** Philippe Quevauviller, 1995-11-06 Quality Assurance in Environmental Monitoring Sampling and Sample Pretreatment Edited by Ph.
