## **Quantitative Landscape Ecology:**

**Quantitative Methods in Landscape Ecology** Monica G. Turner, Robert H. Gardner, 1991 Landscape ecology as a modern interdisciplinary science is making use increasingly of quantitative research techniques adopted from other fields So far no synthetic reference has been available to those wishing to acquaint themselves with new approaches to quantitative analysis of spatial heterogeneity at the landscape level This book seeks to meet this need by providing a conceptual framework and illustrating potential applications for methods such as pattern analysis spatial statistics fractals modeling broad scale studies and extrapolation across scales Each technique is discussed in sufficient detail to be adaptable to a variety of research problems *Quantitative Methods in Landscape Ecology* will be an important resource for researchers and students of landscape and ecosystem ecology in understanding and analyzing the dynamics of complex spatial systems

**Quantitative Methods in Landscape Ecology** Monica Goigel Turner, Robert H. Gardner, 1991 *Quantitative Methods in Landscape Ecology* Monica G. Turner, Robert H. Gardner, 1992-07-30 Landscape ecology as a modern interdisciplinary science is making use increasingly of quantitative research techniques adopted from other fields So far no synthetic reference has been available to those wishing to acquaint themselves with new approaches to quantitative analysis of spatial heterogeneity at the landscape level This book seeks to meet this need by providing a conceptual framework and illustrating potential applications for methods such as pattern analysis spatial statistics fractals spatial modeling broad scale studies and extrapolation across scales Each technique is discussed in sufficient detail to be adaptable to a variety of research problems *Quantitative Methods in Landscape Ecology* is an important resource for researchers and students of landscape and ecosystem ecology in understanding and analyzing the dynamics of complex spatial systems

**Quantitative Approaches to Landscape Ecology** T. Clare, 2000 *Foundation Papers in Landscape Ecology* John A. Wiens, 2007 The editors begin with articles that illuminate the discipline's diverse scientific foundations such as L *Landscape Ecology in Theory and Practice* Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides in depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale the causes of landscape pattern and the interactions of spatial pattern with a variety of ecological processes The text covers the quantitative approaches that are applied widely in landscape studies with emphasis on their appropriate use and interpretation The field of landscape ecology has grown rapidly during this period its concepts and methods have matured and the published literature has increased exponentially Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale and they have influenced the management of natural and human dominated landscapes Landscape ecology is now considered mainstream and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems In response to these rapid developments an updated edition of *Landscape Ecology in Theory and Practice* provides a synthetic overview of landscape ecology including its

development the methods and techniques that are employed the major questions addressed and the insights that have been gained

**Landscape Ecological Analysis** Jeffrey M. Klopatek, Robert H. Gardner, 2012-12-06 Studies in landscape ecology focus on the effect of heterogeneity on ecosystem structure and function Vigorous growth in the field has included the development of methods and results that can be applied to an impressive range of environmental issues The purpose of this book is to provide the reader with a current perspective on this rapidly developing science This book features contributions by internationally renowned experts in the field that address a broad spectrum of political theoretical and applied aspects of the subject Chapters describe a number of methods and models that are used at landscape and regional scales within the context of ecosystem management to assess changes in biodiversity and to evaluate sustainable landscape planning for cultural as well as natural settings Also included are instructional models to assist in teaching

*Landscape Ecology* James Sanderson, 2020-02-10 Landscape Ecology a rapidly growing science quantifies the ways ecosystems interact It establishes links between activities in one region and repercussions in another Landscape Ecology A Top Down Approach serves as a general introduction to this emerging area of study In this book the authors take a top down approach They believe that

**Development and Perspectives of Landscape Ecology** O. Bastian, Uta Steinhardt, 2013-03-14 Development and status of landscape ecology subject of this book During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The roots of landscape ecology are geography and biology The term landscape ecology was first coined by the German scientist Carl Troll in 1939 nce the devel opment center of landscape ecology was in Central Europe Recently also other parts of the world became powernd centers of landscape ecology es pecially Northern America American approaches partly differ essentially from the European because they are focused esp on biogeography and population dynamics In Europe however the geographical roots of land scape ecology playamajor role Landscape is defined as a complex of abiotic biotic and human components Mainly due to linguistic barriers the international discussion does not take notice of approaches and experiences from non anglophone countries in a sufficient manner Therefore this book considers more the German and European views on landscape ecology than the books which were published before It tries to bridge the gaps between theory and practice of landscape ecology as well between the Ger man/European and American approach es The book gives a fundamental representation of landscape ecology which proves to be a young but an interesting and very important transdisci plinary science for the solution of environmental problems Both the theo retical basis and practical application of landscape ecology are considered

*Remote Sensing for Landscape Ecology: New Metric Indicators* Ricardo Lopez, Robert Frohn, 2019-12-12 This book provides the practical basis for the use of remote sensing to accomplish landscape ecological projects through the merging of theory and practice with examples This is a specialized application and both these topics have evolved rapidly in

the past decade This evolution is not in the previous edition and indeed this update provides much new information and valuable ideas for the professional and assist in directing the training of new personnel The new edition will feature a combination of landscape ecology metrics quantitative field measurements and geospatial analyses *Predictive Species and Habitat Modeling in Landscape Ecology* C. Ashton Drew, Yolanda F. Wiersma, Falk Huettmann, 2010-11-25 Most projects in Landscape Ecology at some point define a species habitat association These models are inherently spatial dealing with landscapes and their configurations Whether coding behavioral rules for dispersal of simulated organisms through simulated landscapes or designing the sampling extent of field surveys and experiments in real landscapes landscape ecologists must make assumptions about how organisms experience and utilize the landscape These convenient working postulates allow modelers to project the model in time and space yet rarely are they explicitly considered The early years of landscape ecology necessarily focused on the evolution of effective data sources metrics and statistical approaches that could truly capture the spatial and temporal patterns and processes of interest Now that these tools are well established we reflect on the ecological theories that underpin the assumptions commonly made during species distribution modeling and mapping This is crucial for applying models to questions of global sustainability Due to the inherent use of GIS for much of this kind of research and as several authors research involves the production of multicolored map figures there would be an 8 page color insert Additional color figures could be made available through a digital archive or by cost contributions of the chapter authors Where applicable would be relevant chapters GIS data and model code available through a digital archive The practice of data and code sharing is becoming standard in GIS studies is an inherent method of this book and will serve to add additional research value to the book for both academic and practitioner audiences **Ecological Planning** Forster

Ndubisi, 2003-04-30 Chosen by Choice Magazine as an Outstanding Academic Title for 2003 Ecological planning is the process of understanding evaluating and providing options for the use of landscape to ensure a better fit with human habitation In this ambitious analysis Forster Ndubisi provides a succinct historical and comparative account of the various approaches to this process He then reveals how each of these approaches offers different and uniquely useful perspectives for understanding the dialogue between human and environmental processes Ndubisi begins by examining the philosophies behind and major contributors to ecological thinking during the past 150 years as well as the paradigm shift in planning that occurred in recent decades as a result of a growing global ecological awareness He then turns to landscape suitability analysis and discusses alternative approaches to ecological planning such as applied human ecology applied landscape ecology and others Finally he offers a comparative synthesis of the approaches in order to reveal the theoretical and methodological assumptions inherent when planners choose one approach over the other Ndubisi concludes that no one approach can by itself adequately address the whole spectrum of ecological planning issues For this reason he offers guidance as to when it may be appropriate for landscape architects and planners to emphasize one approach rather than

another **Remote Sensing for Landscape Ecology: New Metric Indicators**, 2017 This book provides the practical basis for the use of remote sensing to accomplish landscape ecological projects through the merging of theory and practice with examples This is a specialized application and both these topics have evolved rapidly in the past decade This evolution is not in the previous edition and indeed this update provides much new information and valuable ideas for the professional and assist in directing the training of new personnel The new edition will feature a combination of landscape ecology metrics quantitative field measurements and geospatial analyses Provided by publisher *Ecological Landscape Design and Planning* Jala Makhzoumi, Gloria Pungetti, 2003-09-02 The authors of this book offer an holistic methodological approach to the design and planning of landscape based on both research and practical experience *Landscape Balance and Landscape Assessment* Rudolf Krönert, Uta Steinhardt, Martin Volk, 2013-03-09 During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The authors follow a hierarchical approach that is inherent in landscape structures and processes as well as in planning practice They show first approaches for the inclusion of factors of the landscape balance into planning procedures and new methods GIS coupled modeling remote sensing combined with more classical approaches from the basis of landscape assessment Approaches for multicriterial landscape assessments are also presented The overall target is to give recommendations for sustainable land use and management Each chapter concludes with a synthesis of the theme under discussion Ideas concerning the state of the art are integrated as well as future trends in research All methodological approaches are explained with examples from differing regions **Data Analysis in Community and Landscape Ecology** R. H. Jongman, C. J. F. Ter Braak, O. F. R. van Tongeren, 1995-03-02 Ecological data has several special properties the presence or absence of species on a semi quantitative abundance scale non linear relationships between species and environmental factors and high inter correlations among species and among environmental variables The analysis of such data is important to the interpretation of relationships within plant and animal communities and with their environments In this corrected version of *Data Analysis in Community and Landscape Ecology* without using complex mathematics the contributors demonstrate the methods that have proven most useful with examples exercises and case studies Chapters explain in an elementary way powerful data analysis techniques such as logic regression canonical correspondence analysis and kriging **Spatial Complexity, Informatics, and Wildlife Conservation** Samuel A. Cushman, Falk Huettmann, 2009-12-21 As Earth faces the greatest mass extinction in 65 million years the present is a moment of tremendous foment and emergence in ecological science With leaps in advances in ecological research and the technical tools available scientists face the critical task of challenging policymakers and the public to recognize the urgency of our global crisis This book focuses directly on the interplay between theory data and analytical methodology in the rapidly evolving fields of animal ecology conservation and management The mixture of topics of particular current relevance includes landscape ecology remote sensing spatial modeling geostatistics genomics and

ecological informatics The greatest interest to the practicing scientist and graduate student will be the synthesis and integration of these topics to provide a composite view of the emerging field of spatial ecological informatics and its applications in research and management

**Landscape Ecology and Resource Management** John A. Bissonette, Ilse Storch, 2003 Although Bissonette Utah Cooperative Fish and Wildlife Research Unit Utah State U U S and Storch Weihenstephan Center of Life Sciences Technische U Munchen Germany state that a cohesive theory of landscape ecology is not yet possible they present 17 papers they see as providing elements of theoretical framework specifically as related to problems of resource management practice Separate sections address linkages between conceptual and quantitative issues between people and the landscape and between theory and management in the field Annotation copyrighted by Book News Inc Portland OR
