Tetlock,2011 We examine whether a simple quantitative measure of language can be used to predict individual firms accounting earnings and stock returns Our three main findings are 1 the fraction of negative words in firm specific news stories forecasts low firm earnings 2 firms stock prices briefly underreact to the information embedded in negative words and 3 the earnings and return predictability from negative words is largest for the stories that focus on fundamentals Together these findings suggest that linguistic media content captures otherwise hard to quantify aspects of firms fundamentals which investors quickly incorporate in stock prices **Quantification in Natural Languages** Emmon Bach,E. Jelinek,A. Kratzer,Barbara B.H. Partee,2013-11-11 This volume of papers grew out of a research project on Cross Linguistic Quantification originated by Emmon Bach Angelika Kratzer and Barbara Partee in 1987 at the University of Massachusetts at Amherst and supported by National Science Foundation Grant BNS 871999 The publication also reflects directly or indirectly several other related activ ities Bach Kratzer and Partee organized a two evening symposium on cross linguistic quantification at the 1988 Annual Meeting of the Linguistic Society of America in New Orleans held without financial support in order to bring the project to the attention of the linguistic community and solicit ideas and feedback from colleagues who might share our concern for developing a broader typological basis for research in semantics and a better integration of descriptive and theoretical work in the area of quantification in particular The same trio organized a six week workshop and open lecture series and related one day confer ence on the same topic at the 1989 LSA Linguistic Institute at the University of Arizona in Tucson supported by a supplementary grant NSF grant BNS 8811250 and Partee offered a seminar on the same topic as part of the Institute course offerings Eloise Jelinek who served as a consultant on the principal grant and was a participant in the LSA symposium and the Arizona workshops joined the group of editors for this volume in 1989 **Power of Deep Learning** Sean Cao,2020 When quantifying qualitative information from unstructured textual data traditional bag of words approaches capture only semantic features of single words phrases The context the sequence of words and the relations among words i e higher order interaction features are ignored We introduce deep neural networks NNs to encode and mimic human intelligence in processing natural language Using the NN based artificial intelligence we construct a new sentiment measure that is specific to performance discussions and is adjusted for complex contextual negations We find that this performance specific
