*Signal and Image Processing in Navigational Systems* Vyacheslav Tuzlukov, 2004-11-29 Classical and modern theories have given us a degree of noise immunity by defining the sufficient statistic of the mean of the likelihood function The generalized theory moves beyond these limitations to determine the jointly sufficient statistics of the mean and variance of the likelihood function *Signal and Image Processing in Navigational Systems* introduces us to the generalized approach and then delves rigorously into the theory and practical applications of this approach This volume represents the most in depth discussion of the generalized approach to date providing many examples and computer models to demonstrate how this approach raises the upper limits of noise immunity for navigation systems leading to better detection performances This book is vital for signal and image processing experts radar communications acoustics and navigational systems designers as well as professionals in the fields of statistical pattern recognition biomedicine astronomy and robotics who wish to extend the boundaries of noise immunity and improve qualitative performance of their systems

Fuzzy Logic-Based Software Systems Konstantina Chrysafiadi, 2023-10-15 This book aims to provide information about significant advances of Fuzzy Logic in software systems to researchers scientists educators students software engineers and developers In particular this book explains how Fuzzy Logic can be used in software systems to automatically predict model decide diagnose recommend etc In more details Fuzzy Logic is an artificial intelligent technique that is ideal for successfully addressing the uncertainty imprecision and vagueness that exist in many diverse scientific and technological areas It was introduced by Lotfi A Zadeh of the University of California at Berkeley as a methodology for computing with words This ability of Fuzzy Logic allows the representation of imprecise and vague data in a more realistic way Therefore Fuzzy Logic based systems can simulate the human reasoning and decision making processes addressing the human subjectivity Fuzzy Logic based software systems are referred to any software that concerns an automated program or process that is used in everyday life like heating or air conditioning system or in the

scientific world like a medical diagnostic system which uses Fuzzy Logic in order to perform reasoning A Fuzzy Logic based system consists of three basic modules Fuzzifier Inference Engine and Defuzzifier The Fuzzifier accepts as input numerical data and assigns them to fuzzy sets with some degree of membership converting crisp data to fuzzy sets The Inference Engine applies fuzzy rules over the defined fuzzy sets and produces outputs based on linguistic information The Defuzzifier converts fuzzy values into crisp values The use of Fuzzy Logic in software systems constitutes a compelling and active research area in recent years especially due to the increased interest in artificial intelligence In the view of the above this book presents thoroughly the Fuzzy Logic theory and the structure and operation of a Fuzzy Logic based system It also explains the role of Fuzzy Logic in artificial intelligence and smart applications presenting how it can improve the efficiency and effectiveness of automatic processes and tasks Furthermore the book describes techniques of artificial intelligence with which the fuzzy logic is combined and how Furthermore this book presents several Fuzzy Logic based software systems in the discipline of medicine education decision making and recommendation natural language processing automotive engineering and industry heating ventilation and air conditioning navigation scheduling network traffic and security Thereby this book can provide deep insights and valuable information not only to readers of computer science related disciplines but also to readers who come from a variety of disciplines and are interesting in systems that perform tasks related to their discipline in a more efficient way
