

REGIONAL GAS EXCHANGE IN THE LUNG

- A normal lung has different V/Q ratios in its different regions. This may be attributed to the pull of gravity and the heart's location relative to the lung.
- Airflow and blood flow increase down the lung, but the differences in perfusion are greater than the differences in ventilation.
- Blood flow is proportionately greater than ventilation at the base- lower V/Q ratio
- Ventilation is proportionately greater than blood flow at the apex- higher V/Q ratio.

Regional Differences In The Lung
