Regulation of Chloroplast Biogenesis Joan H. Argyroudi-Akoyunoglou, 2012-12-06 From July 28 to August 3 1991 an International Meeting on the REGULATION OF CHLOROPLAST BIOGENESIS was held at the capsis Beach Hotel in Aghia Pelaghia on the island of crete Greece The Meeting Advanced Research Workshop Lecture Course was co sponsored by NATO FEBS and IUB and was held under the auspices of the International society for Chloro plast Development the Greek Ministry of Industry Research and Technol ogy and the National Center for Scientific Research Demokritos The Meeting focused on recent advances in the field of chloroplast biogenesis and the regulatory mechanisms underlined and brought together over 120 experts and students of the field from 22 countries The subject of chloroplast biogenesis has experienced great progress in recent years mainly thanks to the application of Molecular Biology techniques and methodology New findings that emerge gradually unravel the regulatory mechanisms involved in the assembly stabilization and growth of the photosynthetic units in thylakoids the signal transduction chain leading from photoreception to gene expression the transport of nuclear coded proteins into stroma soluble supramolecular enzyme complexes as well as thylakoid bound supramolecular complexes involved in light energy transduction It was the aim of this meeting to bring together experts and students coming from diverse disciplines ranging from Botany and plant physiology to Molecular Biology Biophysics and Biotechnology to discuss the recent advances in the field so that thorough exchange of ideas and working hypotheses would be achieved

Regulation of Chloroplast Biogenesis ,2015 The immutans im variegation mutant of Arabidopsis is an ideal model to gain insight into factors that control chloroplast biogenesis im defines the gene for PTOX a plastoquinol terminal oxidase that participates in control of thylakoid redox Here we report that the im defect can be suppressed during the late stages of plant development by gigantea gi2 which defines the gene for GIGANTEA GI a central component of the circadian clock that plays a poorly understood role in diverse plant developmental processes imgi2 mutants are late flowering and display other well known phenotypes associated with gi2 such as starch accumulation and resistance to oxidative stress We show that the restoration of chloroplast biogenesis in imgi2 is caused by a developmental specific de repression of cytokinin signaling that involves crosstalk with signaling pathways mediated by gibberellin GA and SPINDLY SPY a GA response inhibitor Suppression of the plastid defect in imgi2 is likely caused by a relaxation of excitation pressures in developing plastids by factors contributed by gi2 including enhanced rates of photosynthesis and increased resistance to oxidative stress Interestingly the suppression phenotype of imgi can be mimicked by crossing im with the starch accumulation mutant sex1 perhaps because sex1 utilizes pathways similar to gi We conclude that our studies provide a direct genetic linkage between GIGANTEA and chloroplast biogenesis and we construct a model of interactions between signaling pathways mediated by gi GA SPY cytokinins and sex1 that are required for chloroplast biogenesis

Chloroplast Gene Expression: Regulation, Stress Signaling and Biotechnology Tessa M. Burch-Smith, 2024-11-19
This book provides an insightful journey into the realm of chloroplast biology Chloroplasts are the organelles that perform photosynthesis and many of the metabolic processes in plant cells They are a specialized form of plastids whose differentiation is dependent on environmental and developmental signaling Descended from a lineage of free living photosynthesizing prokaryotes chloroplasts and other plastids contain remnants of their ancient genomes and chloroplast gene expression is essential for establishing functional organelles Chloroplast gene expression has features of the prokaryotic gene expression but now involves large suites of nuclear proteins Topics discussed are the identification of these nuclear factors how chloroplast RNA is processed to produce functional organelles translation in chloroplasts and its regulation the environmental factors that influence chloroplast development and how plants deal with defective chloroplasts The book also highlights the evolving landscape of chloroplast engineering in biotechnology recent breakthroughs and their implications for the future A valuable resource for researchers students and enthusiasts alike this book is a compelling testament to the fascinating world of chloroplasts and their burgeoning role in scientific innovation [Insights in Functional and Applied Plant Genomics: 2023](#) Huihui Li, 2025-05-21 We are now entering the third decade of the 21st Century and especially in the last years the achievements made by scientists have been exceptional leading to major advancements in the fast growing field of plant science Frontiers has organized a series of Research Topics to highlight the latest advancements in research across the field of plant science with articles from the Associate Members of our accomplished Editorial Boards This editorial initiative of particular relevance led by Dr Huihui Li Specialty Chief Editor of the Functional and Applied Plant Genomics section is focused on new insights novel developments current challenges latest discoveries recent advances and future perspectives in the field of Functional and Applied Plant Genomics The Research Topic solicits brief forward looking contributions from the editorial board members that describe the state of the art outlining recent developments and major accomplishments that have been achieved and that need to occur to move the field forward Authors are encouraged to identify the greatest challenges in the sub disciplines and how to address those challenges The goal of this special edition Research Topic is to shed light on the progress made in the past decade in the field of Functional and Applied Plant Genomics and on its future challenges to provide a thorough overview of the field This article collection will inspire inform and provide direction and guidance to researchers in the field We welcome original research reviews perspective and thought provoking opinion to this Research Topic *Regulation of Differential Plastid Gene Expression by Internal and External Factors* John Campbell Tonkyn, 1992 *Transcriptional and Post-transcriptional Regulation of Plastid Gene Expression in Spinach* Xing Wang Deng, 1989 **Metabolism, Structure and Function of Plant Tetrapyrroles: Control Mechanisms of**

Apparatus, The biogenesis of chloroplasts is dependent on the coordinate expression of genes encoded in both nuclear and plastid genomes The chloroplast protein import machinery plays key roles in organelle biogenesis by mediating the import

and assembly of thousands of nuclear encoded proteins into the organelle It is now apparent that multiple levels of control exist to integrate the activities of the protein import apparatus into the network of chloroplast nuclear communication that is essential to maintain organelle homeostasis The import apparatus has diversified into small functionally specialized gene families to coordinate the import of distinct classes of differentially expressed proteins Protein targeting to chloroplasts also has evolved regulatory mechanisms that respond to cellular developmental and physiological changes including redox sensing phosphorylation and dual targeting Recent studies also have revealed new components that could represent additional levels of control on the import process
