The Morals of Life Davide Tarizzo, 2024-08-06 A theory of biopolitical power that updates Foucault illustrating the moral implications of modern evolutionary theory In our day the individual has become a life the singular of the plural noun population From this new understanding of what it means to be human comes a new form of biopolitical power with a new set of moral rules In *The Morals of Life* moral philosopher Davide Tarizzo presents a theoretical framework for understanding this transformation of the old fashioned government of living beings as Michel Foucault characterized biopolitics into a new government of modular living beings as well as a template for making sense of biopolitical power that operates on the scale of populations rather than individuals Tarizzo traces population thinking the notion of modular optimization and other conceptual keystones of the current biopolitical regime an ethopolitical regime in the author s terms to their origins in twentieth century biological thought more precisely and critically evolutionary theory Neo Darwinism Tarizzo argues should be seen not only as a scientific paradigm but also as a philosophy per se because it is evolutionary theory that today provides an answer to the old philosophical question What is man This new kind of philosophy his book suggests largely determines

the way in which people look at themselves and society Not only does it contribute to designing new technologies of power but it also fosters subjection to the new ethopolitical regime

Species of Origins Karl Giberson, Donald A. Yerxa, 2002 In *Species of Origins* Karl W. Giberson and Donald A. Yerxa examine America's controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo-Christian religions Visit our website for sample chapters

Darwin's Pious Idea Conor Cunningham, 2010-12-03 According to British scholar Conor Cunningham the debate today between religion and evolution has been hijacked by extremists on one side stand fundamentalist believers who reject evolution outright on the opposing

side are fundamentalist atheists who claim that Darwin's theory rules out the possibility of God. Both sides are dead wrong, argues Cunningham, who is at once a Christian and a firm believer in the theory of evolution. In *Darwin's Pious Idea*, Cunningham puts forth a trenchant, compelling case for both creation and evolution, drawing skillfully on an array of philosophical, theological, historical, and scientific sources to buttress his arguments. [Human Origins](#) Rob DeSalle, Ian Tattersall, 2008. Describes how mapping the human genome has aided paleoanthropologists in their study of ancient bones used to explore human origins from the earliest humans, bipedal apes up to Martin Pickford's *Millennium Man*. **Biocosm** James N. Gardner, 2003. Publisher's description: *Biocosm* challenges both sides of the controversy over evolution and creationism. This carefully reasoned book proposes that life and intelligence have not emerged as a series of random accidents as Darwinists like Stephen Jay Gould have maintained, but are hardwired into the cycle of cosmic creation, evolution, death, and rebirth. Gardner's theory of an exponential coevolution of biological and electronic intelligence, designed and directed, offers an extraordinary vision of a universe of point and purpose.
