Middle Adriatic Freytag-Berndt und Artaria KG, Kartographische Anstalt, 2002-07-01 **Mediterranean Ecosystems**
F.M. Faranda, L. Guglielmo, G. Spezie, 2012-12-06 This new book as described in the Preface presents a collection of contributions by several participants of the First National Congress of Marine Sciences organized by the CoNISMa. The 62 selected papers grouped into seven sections deal with a number of significant and current topics of marine research conducted at Mediterranean stations mostly situated along the Italian coast. The focus of each section is clearly expressed in the headings. The research sites may be conceived as key or focal points in the study of marine ecosystems. Indeed the information collected transcends regional interests by promoting better understanding of the structures and processes characterizing a wide area of the Mediterranean basin. The reader may easily note that in the entire book special attention is devoted to the observed changes and the ensuing diversity in time and space. Temporal diversity ranges from paleontological scales to shorter time scales. The latter is the case for instance with chemical species circulation patterns, energy fluxes linking particulate matter with microbial communities, structure of food webs, bacterial, plant and animal species etc. As to the disciplinary aspects, the majority of papers reflect a modern approach in both conceptual and methodological terms and a marked tendency to overcome the boundaries of specific disciplines. This applies particularly to the evaluation of intraspecific biodiversity where methods borrowed from molecular biology are largely utilized.

The Sustainable City VII M. Pacetti, G. Passerini, C.A. Brebbia, G. Latini, 2012-05-07 Containing research on sustainable urban redevelopment presented at the latest in a biennial series organized by the Wessex Institute of Technology, this book addresses an area of growing interest. The conference series was first held in 2000. These proceedings are split into two volumes. Urban areas produce a series of environmental challenges arising from the consumption of natural resources and the consequent generation of waste and pollution contributing to the development of social and economic imbalances. All these problems which continue to grow in our society require the development of new solutions. Topics include:

Volume I: Urban Strategies, Eco town Planning, Planning development and management, Planning development and management for urban conservation and regeneration, Case studies, Landscape planning and design, Environmental management, Intelligent environments and emerging technologies.

Volume II: Sustainable energy and the city, Waterfront developments, The community and the city, Quality of life, Cultural heritage issues, Transportation Planning for risk, Planning for risk, Transport models in emergency conditions, Industrial wastes as raw materials, Waste management, Safety and security, The city heritage.
