

Show that the points  $A(-1,1)$  ,  $B(4,6)$  and  $C(1,3)$  are collinear.

$$\vec{AB} = \begin{pmatrix} 5 \\ 5 \end{pmatrix}$$

$$\vec{AB} \times \vec{BC} = (5 \times -3) - (5 \times -3)$$

$$\vec{BC} = \begin{pmatrix} -3 \\ -3 \end{pmatrix}$$

$$\vec{AB} \times \vec{BC} = 0$$

Since the cross product is equal to zero  
The points are collinear

**College Geometry** Nathan Altshiller-Court, 1925 *The elements of coordinate geometry, by J.H. Grace and F. Rosenberg. Pt. 2 The conic* John Hilton Grace, 1899 Geometry V. V. Prasolov, V. M. Tikhomirov, 2001-06-12 This book provides a systematic introduction to various geometries including Euclidean affine projective spherical and hyperbolic geometries Also included is a chapter on infinite dimensional generalizations of Euclidean and affine geometries A uniform approach to different geometries based on Klein s Erlangen Program is suggested and similarities of various phenomena in all geometries are traced An important notion of duality of geometric objects is highlighted throughout the book The authors also include a detailed presentation of the theory of conics and quadrics including the theory of conics for non Euclidean geometries The book contains many beautiful geometric facts and has plenty of problems most of them with solutions which nicely supplement the main text With more than 150 figures illustrating the arguments the book can be recommended as a textbook for undergraduate and graduate level courses in geometry **Dublin Examination Papers** Trinity College (Dublin, Ireland), 1885 *The Methods of Plane Projective Geometry Based on the Use of General Homogeneous Coordinates* Edwin Arthur Maxwell, 1963 **Report of the Committee of Council on Education in Scotland** Great Britain. Scottish Education Dept, 1923 **Geometry and Symmetry** L. Christine Kinsey, Teresa E. Moore, Efstratios Prassidis, 2010-04-19 This new book for mathematics and mathematics education majors helps students gain an appreciation of geometry and its importance in the history and development of mathematics The material is presented in three parts The first is devoted to a rigorous introduction of Euclidean geometry the second covers various noneuclidean geometries and the last part delves into symmetry and polyhedra Historical contexts accompany each topic Exercises and activities are interwoven with the text to enable the students to explore geometry Some of the activities take advantage of geometric software so students in particular future teachers gain a better understanding of its capabilities Others explore the construction of simple models or use manipulatives allowing students to experience the hands on creative side of mathematics While this text contains a rigorous mathematical presentation key design features and activities allow it to be used successfully in mathematics for teachers courses as well *Mathematical Questions and Solutions* , 1874 **Mathematical Questions and Solutions, from the "Educational Times."** , 1905 Cambridge University Examination Papers , 1885 **Convexity from the Geometric Point of View** Vitor Balestro, Horst Martini, Ralph Teixeira, 2024-07-14 This text gives a comprehensive introduction to the common core of convex geometry Basic concepts and tools which are present in all branches of that field are presented with a highly didactic approach Mainly directed to graduate and advanced undergraduates the book is self contained in such a way that it can be read by anyone who has standard undergraduate knowledge of analysis and of linear algebra Additionally it can be used as a single reference for a complete introduction to convex geometry and the content coverage is sufficiently broad that the reader may gain a glimpse

of the entire breadth of the field and various subfields The book is suitable as a primary text for courses in convex geometry and also in discrete geometry including polytopes It is also appropriate for survey type courses in Banach space theory convex analysis differential geometry and applications of measure theory Solutions to all exercises are available to instructors who adopt the text for coursework Most chapters use the same structure with the first part presenting theory and the next containing a healthy range of exercises Some of the exercises may even be considered as short introductions to ideas which are not covered in the theory portion Each chapter has a notes section offering a rich narrative to accompany the theory illuminating the development of ideas and providing overviews to the literature concerning the covered topics In most cases these notes bring the reader to the research front The text includes many figures that illustrate concepts and some parts of the proofs enabling the reader to have a better understanding of the geometric meaning of the ideas An appendix containing basic and geometric measure theory collects useful information for convex geometers
