**Object-oriented Programming in COMMON LISP** Sonya E. Keene,1988     [A Programmer's Guide to COMMON LISP](#)  
Deborah G. Tatar,1987     *User Interface Management and Design* David A. Duce,M. Rui Gomes,F. Robert A. Hopgood,John R. Lee,2012-12-06 This volume is a record of the Workshop on User Interface Management Systems and Environments held at INESC Lisbon Portugal between 4 and 6 June 1990 The main impetus for the workshop came from the Graphics and Interaction in ESPRIT Technical Interest Group of the European Community ESPRIT Programme The Graphics and Interaction in ESPRIT Technical Interest Group arose from a meeting of researchers held in Brussels in May 1988 which identified a number of technical areas of common interest across a significant number of ESPRIT I and ESPRIT II projects It was recognized that there was a need to share information on such activities between projects to disseminate results from the projects to the world at large and for projects to be aware of related activities elsewhere in the world The need for a Technical Interest Group was confirmed at a meeting held during ESPRIT Technical Week in November 1989 attended by over 50 representatives from ESPRIT projects and the Commission of the European Communities Information exchange sessions were organized during the EUROGRAPHICS 89 conference with the intention of disseminating information from ESPRIT projects to the wider research and development community both in Europe and beyond

**The Art of the Metaobject Protocol** Gregor Kiczales,Jim Des Rivieres,Daniel G. Bobrow,1991-07-30 The authors introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS The CLOS metaobject protocol is an elegant high performance extension to the CommonLisp Object System The authors who developed the metaobject protocol and who were among the group that developed CLOS introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS Kiczales des Rivieres and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance In presenting the principles of metaobject protocols the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol providing an opportunity for the reader to gain hands on experience with the design process They also include a number of exercises that address important concerns and open issues Gregor Kiczales and Jim des Rivieres are Members of the Research Staff and Daniel Bobrow is a Research Fellow in the System Sciences Laboratory at Xerox Palo Alto Research Center     [Byte](#) ,1991
