Huard,1979 **Mathematical Programming Study** ,1982 **Mathematical Essays: In Honor Of Su Buchin** Chuan-eh Hsiung,1983-12-01 This is a collection of research papers published in various mathematical journals by friends colleagues and former students of Professor Buchin Su in honor of his 80th birthday and 50th year of educational work Professor Su was born in 1902 in Pingyang County Zhejiang Province People s Republic of China He received the degree of Bachelor of Science in mathematics from Tohoku University Sendai Japan in 1927 and the degree of Doctor of Science from the same university in 1931 After returning to China in 1931 he first taught at Zhejiang University in Hangzhou until 1952 when the whole College of Science of Zhejiang University was merged into Fudan University in Shanghai During his 50 years of educational work besides teaching he also has taken up various administrative positions serving as Chairman Dean Vice President and finally the President of Fudan University in 1978 **Implicit Functions and Solution Mappings** Asen L. Dontchev,R. Tyrrell Rockafellar,2014-06-18 The implicit function theorem is one of the most important theorems in analysis and its many variants are basic tools in partial differential equations and numerical analysis This second edition of *Implicit Functions and Solution Mappings* presents an updated and more complete picture of the field by including solutions of problems that have been solved since the first edition was published and places old and new results in a broader perspective The purpose of this self contained work is to provide a reference on the topic and to provide a unified collection of a number of results which are currently scattered throughout the literature Updates to this edition include new sections in almost all chapters new exercises and examples updated commentaries to chapters and an enlarged index and references section *Sequence Transformations* Jean-Paul Delahaye,2012-12-06 The book gives a very clear and concise summary of the important fields of sequence transformations and convergence acceleration methods Some of the outstanding features are precise definitions of algorithmic sequence transformations a study of the power of sequence transformations proof of negative results on acceleration methods namely that some sequence families are not accelerable new algorithms for convergence acceleration in particular automatic selection procedures For researchers and graduate students working in or with convergence acceleration methods and sequence transformations this book is sure to become an important tool This book is a contribution to the theory and practice of convergence acceleration methods It gives a new survey point of view on the subject with positive results new method of acceleration and negative results proofs that some sequence families are not accelerable **Optimization** Jean-Bapiste Hiriart-Urruty,Werner Oettli,Josef Stoer,2020-11-26 This book is concerned with tangent cones duality formulas a generalized concept of conjugation and the notion of maxi minimizing sequence for a saddle point problem and deals more with algorithms in optimization It focuses on the multiple exchange algorithm in convex

programming     *Approximation, Optimization and Mathematical Economics* Marc Lassonde, 2012-12-06 The articles in this proceedings volume reflect the current trends in the theory of approximation optimization and mathematical economics and include numerous applications The book will be of interest to researchers and graduate students involved in functional analysis approximation theory mathematical programming and optimization game theory mathematical finance and economics     *Mathematical Programming* Michel Minoux, 1986 This comprehensive work covers the whole field of mathematical programming including linear programming unconstrained and constrained nonlinear programming nondifferentiable or nonsmooth optimization integer programming large scale systems optimization dynamic programming and optimization in infinite dimensions Special emphasis is placed on unifying concepts such as point to set maps saddle points and perturbations functions duality theory and its extensions     **Point to Set Maps in Mathematical Programming** William W. Hogan, CALIFORNIA UNIV LOS ANGELES WESTERN MANAGEMENT SCIENCE INST., 1971 Properties of point to set maps are studied from an elementary viewpoint oriented toward applications in mathematical programming A number of different definitions and results are compared and integrated Conditions establishing continuity of supremal value functions and properties of maps determined by inequalities are included Author     **Lecture Notes in Pure and Applied Mathematics** , 1983     *Recent Advances in System Modelling and Optimization* Luis Contesse, Rafael Correa, Andres Weintraub, 1986-11     **Mathematics of Operations Research** , 1991 Articles of mathematical interest as well as operations research and management science     **Advances in Mathematical Optimization** Jürgen Guddat, František Nožička, 1988     **Quasidifferential Calculus** Vladimir Fedorovich Dem'ina nov, Laurence Charles Ward Dixon, 1986 The papers in the present study deal with quasidifferentiable functions i e functions which are directionally differentiable and such that at each fixed point the directional derivative as a function of direction can be expressed as the difference of two convex positively homogeneous functions It turns out that quasidifferentiable functions form a linear space closed with respect to all differentiable operations and very importantly with respect to the operations of taking the point wise maximum and minimum Many properties of these functions have been discovered and we are now in a position to speak about Quasidifferential Calculus But the importance of quasidifferentiable functions is not simply based on the results obtained so far We can foresee a much greater role for these functions since as far as the first order properties are concerned all directionally differentiable Lipschitzian functions can be approximated by quasidifferentiable functions This is due to the fact that the directional derivative of any directionally differentiable Lipschitzian function can be approximated to within any given accuracy by the difference of two convex positively homogeneous functions This Study reflects the state of the art of Quasidifferential Calculus The original idea of simply publishing English translations of a number of Russian papers on the subject was immediately rejected by the Editor in Chief Professor R W Cottle we are now grateful for this decision since the authors obtained new results thus leading to a much greater understanding of the subject     *Mathematical*
