Brodie, 2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining active databases and knowledge based expert systems This volume collects the primary readings on the interactions actual and potential between these two fields The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s An in depth introduction discusses basic research motivations giving a survey of the history concepts and terminology of the interaction Major themes approaches and results open issues and future directions are all discussed including the results of a major survey conducted by the editors of current work in industry and research labs Thirteen sections follow each with a short introduction Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages definition and maintenance of integrity constraints in databases and knowledge bases natural language front ends object oriented database management systems implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases logic programming and AI

Database Theory - ICDT '92 Joachim Biskup, Richard Hull, 1992-10-05 The papers in this volume were presented at the International Conference on Database Theory held in Berlin Germany October 14 16 1992 This conference initiated the merger of two series of conferences on theoretical aspects of databases that were formed in parallel by different scientific communities in Europe The first series was known as the International Conference on Database Theory and the second as the Symposium on Mathematical Fundamentals of Database Systems In the future ICDT will be organized every two years alternating with the more practically oriented series of conferences on Extending Database Technology EDBT The volume contains 3 invited lectures and 26 contributed papers selected from a total of 107 submissions The papers are organized into

sections on constraints and decomposition query languages updates and active databases concurrency control and recovery knowledge bases datalog complexity and optimization object orientation information capacity and security and data structures and algorithms Two of the invited papers survey research into theoretical database issues done in Eastern Europe during the past decade

Principles of Database Query Processing for Advanced Applications Clement T. Yu, Weiyi Meng, 1998 The aim of query processing is to find information in one or more databases and deliver it to the user quickly and efficiently Traditional techniques work well for databases with standard single site relational structures but databases containing more complex and diverse types of data demand new query processing and optimization techniques Most real world data is not well structured Today s databases typically contain much non structured data such as text images video and

audio often distributed across computer networks In this complex milieu typified by the world wide Web efficient and accurate query processing becomes quite challenging Principles of Database Query Processing for Advanced Applications teaches the basic concepts and techniques of query processing and optimization for a variety of data forms and database systems whether structured or unstructured This is the only reference work that covers query processing and optimization techniques for structured and unstructured data written with the non expert in mind with a minimum of mathematical details This book teaches query processing techniques for multimedia object oriented deductive parallel and distributed databases as well as heterogeneous multidatabase systems fuzzy relational databases and techniques for different types of unstructured data Each chapter contains examples tables and figures class exercises and a detailed bibliography
