**Remote Sensing with Imaging Radar** John A. Richards, 2009-10-08 This book is concerned with remote sensing based on the technology of imaging radar It assumes no prior knowledge of radar on the part of the reader commencing with a treatment of the essential concepts of microwave imaging and progressing through to the development of multipolarisation and interferometric radar modes which underpin contemporary applications of the technology The use of radar for imaging the earth's surface and its resources is not recent Aircraft based microwave systems were operating in the 1960s ahead of optical systems that image in the visible and infrared regions of the spectrum Optical remote sensing was given a strong impetus with the launch of the first of the Landsat series of satellites in the mid 1970s Although the Seasat satellite launched in the same era 1978 carried an imaging radar it operated only for about 12 months and there were not nearly so many microwave systems as optical platforms in service during the 1980s As a result the remote sensing community globally tended to develop strongly around optical imaging until Shuttle missions in the early to mid 1980s and free flying imaging radar satellites in the early to mid 1990s became available along with several sophisticated aircraft platforms Since then and particularly with the unique capabilities and flexibility of imaging radar there has been an enormous surge of interest in microwave imaging technology Unlike optical imaging understanding the theoretical underpinnings of imaging radar can be challenging particularly when new to the field

**Aerospace Technologies and Applications for Dual Use** Pietro Finocchio, Ramjee Prasad, Marina Ruggieri, 2022-09-01 The events occurred in the last years have shown how the threat related to both intentional and natural disasters could bring the civil and the military worlds closer in the conceivment and deployment of countermeasures as well as in the identification of effective strategies for enhancing the Planet safety and security In this frame the concept of dual use the set of technologies and applications that can be exploited for both civil and military purposes becomes a key topic In addition the

aerospace is a strategic building block in the deployment of a network centric environment that aims at the global protection of the mankind Aerospace is also a natural environment for dual use many of the related enabling technologies have been first developed for the military world and then applied to civil including commercial purposes On September 12 14 2007 an International Symposium has been held in Roma Italy joining the dual use approach with the aerospace technology the international community has been gathered around the key topic aerospace technologies and applications for dual use The event has called experts and operators from the military and civil community belonging to industry scientific and governmental institutions The common aim was an effective convergence between the available and perspected technologies for the civil and military worlds as well as the conceivment of applications that can take the maximum benefit from the dual approach optimizing the available economic resources The Symposium has included invited only contributions and an industrial panel The main results of the Symposium derived from key note speeches invited lectures panel discussions and conclusions have created the starting material to develop this Edited Book Principles and Practice of Radar Reginald Sidney Henry Boulding,1963 L rebogsagtig gennemgang radarteori og den praktiske anvendelse af radarsystemer
