

Non-uniform random number distribution

Use the example we did in the class about generating random numbers with a non-uniform probability (ClassExercise.Random.Num.Distributions.Apr12.ipynb) and write a program that generates random numbers with a probability of $p(y) = -y + \sqrt{2}$ for $0 < y < \sqrt{2}$ [$p(y)$ is already normalized to 1].

Confirm that the numbers give the desired probability distribution by plotting them using the `hist` function in `matplotlib`.

Finding π

Use the “stone throwing” method described in slide #260 to find the area of a unit circle (which is simply π) using the square box shown in slide #262. Note that the area of the square is 4. Use 1000 random points with x and y coordinates between -1 and 1 first. Examine the improvement in the accuracy of your estimate for π when you increase the number of random points to 100000.
