Aleksandrovich Yakubaitis,1983 **Computer Network Architectures and Protocols** Paul Green,2012-12-06 This is a book about the bricks and mortar out of which are built those edifices that so well characterize late twentieth century industrial society networks of computers and terminals Such computer networks are playing an increasing role in our daily lives somewhat indirectly up to now as the hidden servants of banks retail credit bureaus airline reservation offices and so forth but soon they will become more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks work is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area finds himself in suddenly unfamiliar territory It is no longer sufficient for him to think of transmission modulation noise immun ity error bounds and other abstractions of a single communication link he is dealing now with a topologically complex interconnection of such links And what is more striking solving the problems of getting the signal from one point to another is just the beginning of the communication process The communication must be in the right form to be routed properly to be handled without congestion and to be understood at the right points in the network The communication scientist suddenly finds himself charged with responsibility for such things as code and format conversions addressing flow control and other abstractions of a new and challenging kind [Distributed Computer Control Systems 1988](#) Th. d'Epinay Lalive,M.G. Distributed Systems--architecture and Implementation Butler W. Lampson, Manfred Paul, H. J. Siegert, 1983

Distributed Network Systems Weijia Jia, Wanlei Zhou, 2006-06-14. Both authors have taught the course of Distributed Systems for many years in the respective schools. During the teaching, we feel strongly that Distributed systems have evolved from traditional LAN-based distributed systems towards Internet-based systems. Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols, we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today's distributed technology. Specifically, from to-date concepts, algorithms, and models to implementations for both distributed system designs and application programming. Thus the philosophy behind this book is to integrate the concepts, algorithm designs, and implementations of distributed systems based on network programming. After using several materials of other textbooks and research books, we found that many texts treat the distributed systems with separation of concepts, algorithm design, and network programming, and it is very difficult for students to map the concepts of distributed systems to the algorithm design, prototyping, and implementations. This book intends to enable readers, especially postgraduates and senior undergraduate level, to study up-to-date concepts, algorithms, and network programming skills for building modern distributed systems. It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation.
