reviewed and are published in an archival proceedings volume PSB 2006 will be held January 3-7 2006 at the Grand Wailea Maui. Tutorials will be offered prior to the start of the conference. PSB 2006 will bring together top researchers from the US, the Asian Pacific nations and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling and other computational methods as applied to biological problems with emphasis on applications in data rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub disciplines within biocomputing. For that reason it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's hot topics. In this way the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

**South African Statistical Journal**, 1977     **Dissertation Abstracts International**, 1975     *A Multiple-decision Approach to the Selection of the Best Set of Predictor Variates* John Schmidt Ramberg, 1969. Some indifference zone multiple decision selection procedure formulations of prediction problems involving multivariate normal populations are considered. These problems are of two types. Part I considers problems involving  $k$  bivariate normal populations where the goal is to select the best population. In this part the goodness of the prediction is measured in terms of three different parameters: the population conditional variance, the population correlation coefficient and the absolute value of the population correlation coefficient. Part II considers the problem of selecting the best set of a preassigned number  $t$  variates from a set of  $k$  predictor variates for predicting a designated variate, the predictand. The best set of predictor variates is defined to be the set of  $t$  variates for which the predictand has the smallest population conditional variance or equivalently the largest population multiple correlation coefficient. Sample size requirements are obtained using asymptotic distribution theory of the transformed statistics.     The Publishers Weekly, 1968
