Semantics Of Parallelism Noninterleaving Representation Of Behaviour:

Semantics of Parallelism Michael W. Shields, 2012-12-06 Semantics of Parallelism is the only book which provides a unified treatment of the non interleaving approach to process semantics as opposed to the interleaving approach of the process algebraists Many results found in this book are collected for the first time outside conference and journal articles on the mathematics of non interleaving semantics It gives the reader a unified view of various attempts to model parallelism within one conceptual frame work It is aimed at postgraduates in theoretical computer science and academics who are teaching and researching in the modelling of discrete concurrent distributed systems Workers in the information technology industry who are interested in available theoretical studies on parallelism will also be interested in this book [Half a Century of Inspirational Research](#) Wojciech Penczek, Grzegorz Rozenberg, 2007 Honors Professor Antoni Mazurkiewicz who during his long scientific career made fundamental contributions to theoretical computer science This book includes contributions which span a range of research areas including the theory of programming models of concurrent and distributed systems and decomposition methods for Petri nets **Mathematical Reviews**, 1998 **American Book Publishing Record**, 1997-09 [PARLE '91. Parallel Architectures and Languages Europe](#) Emile H. L. Aarts, Jan Leeuwen, 1991 **Subject Guide to Books in Print**, 1991 [International Books in Print](#), 1986 *Foundations of Software Science and Computation Structures* Mikołaj Bojańczyk, Alex Simpson, 2019-04-05 This open access book constitutes the proceedings of the 22nd International Conference on Foundations of Software Science and Computational Structures FOSSACS 2019 which took place in Prague Czech Republic in April 2019 held as part of the European Joint Conference on Theory and Practice of Software ETAPS 2019 The 29 papers presented in this volume were carefully reviewed and selected from 85 submissions They deal with foundational research with a clear significance for software science **The British National Bibliography** Arthur James Wells, 1998 **Finite Representations of CCS and TCSP Programs by Automata and Petri Nets** Dirk A. Taubner, 1989-08-09 This work relates different approaches for the modelling of parallel processes On the one hand there are the so called process algebras or abstract programming languages with Milner's Calculus of Communicating Systems CCS and the theoretical version of Hoare's Communicating Sequential Processes CSP as main representatives On the other hand there are machine models i.e. the classical finite state automata transition systems for which however more discriminating notions of equivalence than equality of languages are used and secondly there are differently powerful types of Petri nets namely safe and general place transition nets respectively and predicate transition nets Within a uniform framework the syntax and the operational semantics of CCS and TCSP are explained We consider both Milner's well known interleaving semantics which is based on infinite transition systems as well as the new distributed semantics introduced by Degano et al which is based on infinite safe nets The main part of this work contains three syntax driven constructions of transition systems safe nets and predicate transition nets respectively Each of them is accompanied

by a proof of consistency Due to intrinsic limits which are also investigated here neither for transition systems and finite nets nor for general nets does a finite consistent representation of all CCS and TCSP programs exist However sublanguages which allow finite representations are discerned On the other hand the construction of predicate transition nets is possible for all CCS programs in which every choice and every recursive body starts sequentially
