Sensitive Crystallization Processes Ehrenfried E. Pfeiffer, 1975-12 Dr Ehrenfried Pfeiffer writes Research carried on since 1925 has shown that the formation and arrangement of crystals during the process of crystallization can under certain conditions be greatly influenced by the admixture of various substances Hence from these alterations in form a priori conclusions can be drawn about the qualities and characteristics of the admixture itself This is an essential element in his work of analyzing the health and qualities of human blood as an aid in the process of diagnoses *Sensitive Crystallization Processes* Ehrenfried Pfeiffer, 1936

Sensitive water : Dynamization & Information Milène Souvignet, 2025-11-17 In traditional societies it is often believed that the Universe is one If we hold to this supposition each discipline suggests vision of the world based on its own concept and frame of reference Therefore overall everything is linked and closely interconnected It is in this frame of mind that water is approached from the little known and little documented angle of its sensitivity or dynamization The goal here is to summarise all the research carried out on this topic without making a catalogue out of it but rather trying to retrace the Ariadne s thread in order to link the different results and place each of them within a wider field of coherence and understanding Each of these advances is supported by the results and thoughts of numerous researchers each contributing a piece of the jigsaw according to his or her own speciality or approach physical chemistry biology quantum mechanics general relativity dynamics movement and so forth Nearly forty researchers from all over the world are involved from the 1900s to the present day including Jeanne Rousseau Goethe Theodor Schwenck Marc Henry Nassim Hamein Gerald Pollack and many others By analysing the work of each of them the author gradually offers here an increasingly accurate but also vast and coherent picture of the reality of water The starting point is based on what is known and commonly accepted by the scientific community Little by little the study progresses in a field that is increasingly confidential and or underdeveloped at present apart from in a few private or cutting edge research environments Three approaches are being explored the experimental way the observational way artistic way the theoretical mathematical way with the three major sciences of today Newton s classical mechanics macroscopic scale quantum mechanics infinitely small scale and Einstein s general relativity infinitely large scale
