Coding, Cryptography and Combinatorics Keqin Feng, Harald Niederreiter, Chaoping Xing, 2012-12-06 It has long been recognized that there are fascinating connections between coding theory cryptology and combinatorics Therefore it seemed desirable to us to organize a conference that brings together experts from these three areas for a fruitful exchange of ideas We decided on a venue in the Huang Shan Yellow Mountain region one of the most scenic areas of China so as to provide the additional inducement of an attractive location The conference was planned for June 2003 with the official title Workshop on Coding Cryptography and Combinatorics CCC 2003 Those who are familiar with events in East Asia in the first half of 2003 can guess what happened in the end namely the conference had to be cancelled in the interest of the health of the participants The SARS epidemic posed too serious a threat At the time of the cancellation the organization of the conference was at an advanced stage all invited speakers had been selected and all abstracts of contributed talks had been screened by the program committee Thus it was decided to call on all invited speakers and presenters of accepted contributed talks to submit their manuscripts for publication in the present volume Altogether 39 submissions were received and subjected to another round of refereeing After careful scrutiny 28 papers were accepted for publication

Combinatorial Optimization William Cook, László Lovász, Paul D. Seymour, 1995-01-01 This is a carefully refereed collection of invited survey articles written by outstanding researchers Aimed at researchers in discrete mathematics operations research and the theory of computing this book offers an in depth look at many topics not treated in textbooks

Network and System Security Jiageng Chen, Debiao He, Wei Xie, 2026-02-03 This book constitutes the refereed proceedings of the 19th International Conference on Network and System Security NSS 2025 held in Wuhan China during December 5-7 2025 The 22 full papers presented in this book were carefully reviewed and selected from 74 submissions The accepted papers cover multiple topics of cyber security and applied cryptography

Secure Broadcast Communication Adrian Perrig, J.D. Tygar, 2012-12-06 Secure Broadcast Communication in Wired and Wireless Networks presents a set of fundamental protocols for building secure information

distribution systems Applications include wireless broadcast IP multicast sensor networks and webs ad hoc networks and satellite broadcast This book presents and compares new techniques for basic operations including key distribution for access control source authentication of transmissions and non repudiation of streams This book discusses how to realize these operations both with high performance processors and resource constrained processors It shows how to protect against adversaries who inject packets or eavesdrop The focus is on functional descriptions rather than theoretical discussions Protocols are presented as basic building blocks that can be combined with each other and traditional security protocols The book illustrates these protocols in practice by presenting a real implementation that provides security for an ad hoc sensor network This book can serve as a textbook or supplementary reading in graduate level courses on security or networking or can be used for self study

Algorithms and Data Structures Frank Dehne, 1993-07-28 The papers in this volume were presented at the Third Workshop on Algorithms and Data Structures WADS 93 held in Montreal Canada August 1993 The volume opens with five invited presentations Computing the all pairs longest chains in the plane by M J Atallah and D Z Chen Towards a better understanding of pure packet routing by A Borodin Tolerating faults in meshes and other networks abstract by R Cole A generalization of binary search by R M Karp and Groups and algebraic complexity abstract by A C Yao The volume continues with 52 regular presentations selected from 165 submissions each of which was evaluated by at least three program committee members many of whom called upon additional reviewers

A Bibliography on Computational Molecular Biology and Genetics Sarah Barron, Matthew Witter, Gongxian Liu, 1991 Provides a definitive bibliographic review of the literature related to DNA mapping and sequence analysis with a focus on computer and mathematical aspects of molecular biology and genetics Over 2200 entries arranged by author's name

Concise Encyclopedia of Coding Theory W. Cary Huffman, Jon-Lark Kim, Patrick Solé, 2021-03-25 Most coding theory experts date the origin of the subject with the 1948 publication of A Mathematical Theory of Communication by Claude Shannon Since then coding theory has grown into a discipline with many practical applications antennas networks memories requiring various mathematical techniques from commutative algebra to semi definite programming to algebraic geometry Most topics covered in the Concise Encyclopedia of Coding Theory are presented in short sections at an introductory level and progress from basic to advanced level with definitions examples and many references The book is divided into three parts Part I fundamentals cyclic codes skew cyclic codes quasi cyclic codes self dual codes codes and designs codes over rings convolutional codes performance bounds Part II families AG codes group algebra codes few weight codes Boolean function codes codes over graphs Part III applications alternative metrics algorithmic techniques interpolation decoding pseudo random sequences lattices quantum coding space time codes network coding distributed storage secret sharing and code based cryptography Features Suitable for students and researchers in a wide range of mathematical disciplines Contains many examples and references Most topics take the reader to the frontiers of research
