Meaning Reference And Necessity New Studies In Semantics:

Meaning, Reference and Necessity Simon Blackburn, 1975 A volume of studies in philosophical logic by a group of younger philosophers in the UK There is a core of problems in the theory of meaning which have been accorded a central importance by philosophers logicians and theoretical linguists and which have stimulated some of the most powerful and original work in these subjects The contributors to the volume have a common interest in these topics insist on their continuing and fundamental importance and offer here a distinctive and original contribution to them Numerous Meanings Bert Bultinck, 2021-10-25 Outlandish as it may seem to the uninitiated the meaning of English cardinal numbers has been the object of many heated and fascinating debates Notwithstanding the numerous important objections that have been formulated in the last three decades the neo Gricean scalar account is still the standard semantic description of numerals In this book Bultinck writes the history of this implicature driven approach and demonstrates that it suffers from methodological insecurity and postulates highly non conventional meanings of numerals as their literal meaning while it confuses the level of lexical semantics with that of utterances and cannot deal with a large number of counter examples Relying on the results of an extensive corpus based analysis an alternative account of the meaning of English cardinals and the ways in which their interpretation is influenced by other linguistic elements is presented As such this analysis constitutes a prism that offers today's linguist an iridescent history of one of the most fascinating if often misconstrued topics in contemporary meaning research the conversational implicatures **Russell-Arg Philosophers** Sainsbury, 2010-07-13 First Published in 1999 Routledge is an imprint of Taylor Francis an informa company **Saul Kripke** G.W. Fitch, 2004-09-02 Saul Kripke's work has had a tremendous impact on philosophy in the last thirty years and continues to dominate key debates in the field In the first introduction to his philosophy written expressly for general students G W Fitch provides a thorough exposition of Kripke's ideas Beginning with a discussion of the early work on modal logic the foundation for many of his later philosophical contributions Fitch also examines the central ideas and arguments in Naming and Necessity including Kripke's account of ordinary proper names theories of reference the conception of necessity and the nature of identity He goes on to discuss Kripke's views on theoretical identifications the puzzle of belief and his argument against materialism as well as outlining his work on semantic paradoxes his theory of truth and his controversial interpretation of Wittgenstein's famous private language argument Kripke's ideas are situated alongside those of his precursors and some of the most important and interesting responses to them are explored Fitch clarifies Kripke's ground breaking contributions to philosophy and shows how they have challenged traditional interpretations Nondescriptive Meaning and Reference Wayne A. Davis, 2005-07-14 Nondescriptive Meaning and Reference extends Wayne Davis's groundbreaking work on the foundations of semantics Davis revives the classical doctrine that meaning consists in the expression of ideas and advances the expression theory by showing how it can account for standard proper names and the distinctive way their meaning determines their reference He also

shows how the theory can handle interjections syncategorematic terms conventional implicatures and other cases long seen as difficult for both ideational and referential theories The expression theory is founded on the fact that thoughts are event types with a constituent structure and that thinking is a fundamental propositional attitude distinct from belief and desire Thought parts ideas or concepts are distinguished from both sensory images and conceptions Word meaning is defined recursively sentences and other complex expressions mean what they do in virtue of what thought parts their component words express and what thought structure the linguistic structure expresses and unstructured words mean what they do in living languages in virtue of evolving conventions to use them to express ideas The difficulties of descriptivism show that the ideas expressed by names are atomic or basic The reference of a name is the extension of the idea it expresses which is determined not by causal relations but by its identity or content together with the nature of objects in the world Hence a name's reference is dependent on but not identical to its meaning A name is directly and rigidly referential because the extension of the idea it expresses is not determined by the extensions of component ideas The expression theory thus has the strength of Fregeanism without its descriptivist bias and of Millianism without its referentialist or causalist shortcomings The referential properties of ideas can be set out recursively by providing a generative theory of ideas assigning extensions to atomic ideas and formulating rules whereby the semantic value of a complex idea is determined by the semantic values of its components Davis also shows how referential properties can be treated using situation semantics and possible worlds semantics The key is to drop the assumption that the values of intension functions are the referents of the words whose meaning they represent and to abandon the necessity of identity for logical modalities Many other pillars of contemporary philosophical semantics such as the twin earth arguments are shown to be unfounded

Meeting Handbook Linguistic Society of America, 1975

The Ontology of the Analytic Tradition and Its Origins Jan Dejnozka, 1996 The analytic movement advertised its linguistic turn as a radical break from the two thousand year old substance tradition But this is an illusion On the fundamental level of ontology there is enough reformulation and presupposition of traditional no entity without identity themes to analogize Frege Russell Wittgenstein and Quine to Aristotle as paradigmatic of modified realism Thus the pace of ontology is glacial Frege and Russell not Wittgenstein and Quine emerge as the true analytic progenitors of no entity without identity offering between them at least twenty nine private language arguments and sixty four no entity without identity theories
