data It concludes by reviewing issues related to the NIBRS and the NCVS The UCR represents the first effort to create a national standardised measure of the incidence of crime It was conceived as a way to measure the effectiveness of local law enforcement and to provide law enforcement with data that could be used to help fight crime UCR data are now used extensively by researchers government officials and the media for research policy and planning purposes The UCR also provides some of the most commonly cited crime statistics in the United States The UCR reports offence and arrest data for 8 different Part I offences and arrest data for 21 different Part II offences The NIBRS was developed by the Federal Bureau of Investigation to respond to the law enforcement community s belief that the UCR needed to be updated to provide more in depth data to meet the needs of law enforcement into the 21st century The NIBRS collects data including data on offence s offender s victim s arrestee s and any property involved in an offence for 46 different Group A offences and 11 different Group B offences Despite the more detailed crime data that the NIBRS can provide nation wide implementation of the program has been slow for a variety of reasons including cost considerations The NCVS is the primary source of information on the characteristics of criminal victimisation and on the number and types of crime not reported to law enforcement The NCVS has four major objectives 1 to develop detailed information about the victims and consequences of crime 2 to estimate the number and types of crimes not reported to police 3 to provide uniform measures of selected types of crimes and 4 to permit comparisons over time and population type e g urban suburban and rural The NCVS asks respondents whether they have been the victim of rape and sexual assault robbery simple and aggravated assault purse snatching pick pocketing burglary theft or motor vehicle theft In addition to collecting data on the number of victimisations the NCVS gathers data on the details of each incident of victimisation **Measuring Crime and Criminality** John MacDonald,2017-10-06 Measuring Crime and Criminality focuses on how different approaches to measuring crime and criminality are used to test existing criminological theories Each chapter reviews a key approach for measuring criminal behavior and discusses its strengths or weaknesses for explaining the facts of crime or answers to central issues of criminological inquiry The book describes the state of the field on different approaches for measuring crime and criminality as seen by prominent scholars in the field Among the featured contributions are The Use of Official Reports and Victimization Data for Testing Criminological Theories The Design and Analysis of Experiments in Criminology and Growth Curve Mixture Models for Measuring Criminal Careers Also included are papers titled Counterfactual Methods of Causal Inference and Their Application to Criminology Measuring Gene Environment Interactions in the Cause of Antisocial Behavior and What Has Been Gained and Lost through Longitudinal Research and Advanced Statistical Models This volume of Advances in Criminological Theory illustrates how understanding the various ways criminal behavior is measured is useful for developing theoretical insights on the causes of crime Modernizing Crime Statistics: Report 2 National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Committee on Law and Justice,Committee on National Statistics,Panel on
