Open Questions In Relativistic Physics:

Open Questions in Relativistic Physics Franco Selleri, 1998 **Revisiting the Foundations of Relativistic Physics** Ashtekar, 2011-06-28 This book is for physicists historians and philosophers of physics as well as students seeking an introduction to ongoing debates in relativistic and quantum physics This title is unique in that it comprises contributions by leading physicists philosophers and historians of science it covers the recent debates on the emergence of relativity and quantum theory it includes chapters with an introductory character comprehensible to students and science teachers it can be used in graduate level courses in the history and philosophy of science it strengthens the bonds between the communities of scientists historians and philosophers

The Universe of General Relativity A.J. Kox, Jean Eisenstaedt, 2006-09-10 A century ago in 1905 Albert Einstein published On the Electrodynamics of Moving Bodies in which the foundations were laid for the Special Theory of Relativity Ten years later his relativistic theory of gravitation and the General Theory of Relativity appeared Fifty years ago Einstein passed away in Princeton In the 1980s John Stachel then Editor of the Collected Papers of Albert Einstein brought together a group of historians philosophers physicists and mathematicians who had one thing in common a lively interest in the history and foundations of the theories of relativity At a meeting in 1986 at Osgood Hill this group met for the first time to discuss the prehistory development reception and other aspects of relativity It was the beginning of a valuable tradition Since then every three or four years a meeting has been organized during which historical and foundational issues in general and special relativity have been discussed Osgood Hill was followed by Luminy in 1988 Then came Johnstown 1991 Berlin 1995 Notre Dame 1999 and finally Amsterdam 2002 the proceedings of which are presented in this volume supplemented with some papers from the preceding meeting Once again these articles clearly show that an historical approach can lead to new insights into the development and elaboration of relativity The prehistory of special relativity and an early attempt at a relativistic theory of gravitation are covered in part by John Stachel and Shaul Katzir respectively

The Reality of Time, and Einstein's Spider Web Rocco Vittorio Macri, 2020-05-21 The greatest mystery of all the enigma of Time shone like a blinding quasar upon the eyes of the creator of the Theory of Relativity Albert Einstein Indeed there has been no significant thinker from antiquity down to the present day who has not confronted the mystery of Time and made it an essential part of his own philosophy Even in Plotinus days the problem of Time was considered to be ancient and continually revived Thinking about Time is much like ploughing the ocean Despite this the Twentieth Century saw an unprecedented and new operational definition set forth by Einstein who stripped the notion of Time of all metaphysical content and made it ontologically eliminable The verdict in our days is Time does not exist Yet there have not been wanting thinkers who have attempted to swim against the current to throw down the gauntlet to the Murderer of Time to the Demolisher of the Absolute showing that the Time is not an illusion Time is real These stirring moments in the history of intellectual endeavour are collected here revivifying the philosophical face of every dissident The subject is

interesting not only to experts in the field but also to every inquiring mind thirsting for historical truth The reader who is fascinated by the fundamental ideas of physics and philosophy will find great satisfaction here In addition he will find here the ultimate roots of our contemporary Weltanschauung

Relativity in Rotating Frames Guido Rizzi, Matteo Luca Ruggiero, 2003-12-31 Even if the subject is a long standing one this is the first monograph on this field On the one hand this book is intended to give a rather wide review on this field both in a historical and pedagogical perspective on the other hand it aims at critically re-examining and discussing the most controversial issues For instance according to some authors the celebrated Sagnac effect is a disproof of the theory of relativity applied to rotating frames according to others it is an astonishing experimental evidence of the relativistic theory In order to give the reader a deeper insight into this research field the contributing authors discuss their opinions on the main subjects in an enthralling virtual round table in this way the reader can get a direct comparison of the various viewpoints on the most controversial and interesting topics This is particularly expedient since the differences in the various approaches are often based upon subtleties that can be understood only by a direct comparison of the underlying hypotheses

Has the Last Word Been Said on Classical Electrodynamics? Andrew Chubykalo, 2004

Levy derives a set of space time transformations that are more general than the Lorentz Poincar transformations The implications for fundamental physics are shown to be wide reaching New Relativistic Paradoxes and Open Questions Florentin Smarandache, **Modern Nonlinear Optics** Myron Wyn Evans,2001 *Einstein and the Ether* Ludwik Kostro,2000 **General physics, relativity, astronomy and mathematical physics and methods** ,1998 Subject Guide to Books in Print ,2001 The Revolt Against Dualism Arthur Oncken Lovejoy,1929 **Meeting the Entropy Challenge** Gian Paolo Beretta,Ahmed Ghoniem,George Hatsopoulos,2008-08-25 All papers have been peer reviewed World renowned experts gathered in symposium style to explore the role of the second law and entropy in quantum theory cosmology biology nonequilibrium and energy Their exciting discussions about recent advances and open fundamental challenges paint an excellent state of the art of frontier research about thermodynamics in science and engineering

Einstein and Poincaré Valeri V. Dvoeglazov,2006 Statistical Geometry and Applications to Microphysics and Cosmology sisir roy,1998-01-31 Recent results from high energy scattering and theoretical developments of string theory require a change in our understanding of the basic structure of space time This book is about the advancement of ideas on the stochastic nature of space time from the 1930s onward In particular the author promotes the concept of space as a set of hazy lumps first introduced by Karl Menger and constructs a novel framework for statistical behaviour at the microlevel The various chapters address topics such as space time fluctuation and random potential non local fields and the origin of stochasticity Implications in astro particle physics and cosmology are also explored Audience This volume will be of interest to physicists chemists and mathematicians involved in particle physics astrophysics and cosmology **Discovery** ,1929

Localizability and Space in Quantum Physics Henri Bacry,1988 This book discusses in detail the concept of light quanta photons and presents a historical survey of the ideas involved It analyses critically the principles of complementarity and correspondence as well as the quantization procedure The work of Wigner Newton and Wightman on localized states is discussed The author presents many new ideas and gives a new way of defining the position operator He invites physicists to look in new directions and aims to convince the reader that light quanta are not compatible with our present concept of space in quantum physics The book should be of interest to students as well as to researchers in modern physics and should revive the discussion of the foundations of modern physics
