Science And Music:

The Science of Music and the Music of Science Michael J Montague,2019-04-07 Science and music scientists and musicians are inseparable and symbiotic For over 2 500 years music has inspired scientific investigation and progress In return science has provided musicians with untold numbers of valuable insights into their art and craft as well as many powerful technologies The last 25 years have witnessed an even more intimate connection Neuroscience now possesses new tools to image living human brains in real time as our brains engage in specific tasks In using these powerful tools neuroscientists have discovered that nothing demands more of human cognitive abilities than music making and consequently neuroscience now relies frequently upon music as an amazingly effective research probe During this same period of time physicists and mathematicians have investigated the fundamental nature of reality discovering the musical nature of the Cosmos itself Quite remarkably the equations and concepts of music theory are similar to the concepts used for our best ideas about Nature This book describes these scientific advances accessibly and without jargon but entertainingly and accurately It provides the reader with an easy and graceful insight into basic music theory the biology of the brain the use of music as brain therapy the psychology of music the tools of the composer the importance of music education for our children and finally the story of our search for the fundamental nature of reality itself leading ultimately to a better understanding of our humanity It is written for anyone interested in music science the well being of our children and the best aspects of our humanity as we live in this magnificent Cosmos

Music and the Making of Modern Science Peter Pesic,2022-09-13 A wide ranging exploration of how music has influenced science through the ages from fifteenth century cosmology to twentieth century string theory In the natural science of ancient Greece music formed the meeting place between numbers and perception for the next two millennia Pesic tells us in *Music and the Making of Modern Science* liberal education connected music with arithmetic geometry and astronomy within a fourfold study the quadrivium Peter Pesic argues provocatively that music has had a formative effect on the development of modern science that music has been not just a charming accompaniment to thought but a conceptual force in its own right Pesic explores a series of episodes in which music influenced science moments in which prior developments in music arguably affected subsequent aspects of natural science He describes encounters between harmony and fifteenth century cosmological controversies between musical initiatives and irrational numbers between vibrating bodies and the emergent electromagnetism He offers lively accounts of how Newton applied the musical scale to define the colors in the spectrum how Euler and others applied musical ideas to develop the wave theory of light and how a harmonium prepared Max Planck to find a quantum theory that reengaged the

mathematics of vibration Taken together these cases document the peculiar power of music its autonomous force as a stream of experience capable of stimulating insights different from those mediated by the verbal and the visual An innovative e book edition available for iOS devices will allow sound examples to be played by a touch and shows the score in a moving line

Quantifying Music H.F. Cohen,2014-03-14 The soul rejoices in perceiving harmonious sound when the sound is not harmonious it is grieved From these affects of the soul are derived the name of consonances for the harmonic proportions and the name of dissonances for the unharmonic proportions When to this is added the other harmonie proportion which consists of the longer or shorter duration of musical sound then the soul stirs the body to jumping dance the tongue to inspired speech according to the same laws The artisans accommodate to these harmonies the blows of their hammers the soldiers their pace As long as the harmonies endure everything is alive everything stiffens when they are disturbed Thus the German astronomer Johannes Kepler evokes the power of music Where does this power come from What properties of music enable it to stir up emotions which may go far beyond just feeling generally pleased and which may express themselves for instance in weeping in laughing in trembling over the whole body in a marked acceleration of breathing and heartbeat in participating in the rhythm with the head the hands the arms and the feet From the beginning of musical theory the answer to this question has been sought in two different directions
