Science In Context Readings In The Sociology Of Science:

Science in Context Barry Barnes, David O. Doing Science (RLE Edu O) Robin Millar, 2012-05-31 Doing Science is unique in seeking to make explicit the links between science education and science studies These fields of study and their respective academic communities whilst appearing to have many potential points of contact remain surprisingly separate with little apparent recognition of the relevance to the interests of each of the work done within the other tradition Presenting detailed accounts of current research the book highlights the significance of modern science studies for classroom practice and conversely the importance of the classroom and teaching laboratory as a context for science studies The thread which runs through the collection as a whole is children s experience of doing science and the image of science which learners pick up along with the science knowledge understanding and skills they require

Defining Science Charles Alan Taylor, 1996 The most interesting entry point to the demarcation problem in science since Popper s seminal formulation Steve Fuller Professor of Sociology Social Policy Durham University What is science What isn t science And who draws the line between them These are rhetorical concerns as Charles A Taylor demonstrates in this ambitious book about the theoretical and cultural underpinnings of scientific practice By showing how boundaries between science and nonscience are rhetorically constructed and socially enforced Defining Science reveals the political and philosophical significance of such distinctions Taylor examines the traditional demarcation problem the problem of defining the boundaries of science as an ongoing rhetorical negotiation involving a full range of historical interests and social actors from researchers and lab technicians to

governmental and industrial patrons program administrators political representatives journalists and educators His case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields In both cases presented here with concision and insight prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow Taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view His reformulation of philosophical historical and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation Furthermore *Defining Science* suggests how we as a community can positively influence future constructions of science and society This book confronts what is arguably the late twentieth century's definitive problem in a provocative and interesting way It will be of interest to anyone engaged with the question of knowledge in public life Charles Arthur Willard Professor and Chair of the Department of Communication University of Louisville *Sociology of Science* Barry Barnes,1972

Elgar Encyclopedia of Science and Technology Studies Ulrike Felt,Alan Irwin,2024-10-03 This Encyclopedia provides a comprehensive overview of the expanding field of science and technology studies STS Covering key frameworks themes and topics Ulrike Felt and Alan Irwin bring together expert contributors to map the development of STS within its historical and intellectual context **Chemical Sciences in the Modern World** Seymour H. Mauskopf,2016-11-11 It would be difficult to overestimate the importance of the chemical sciences to the modern world In the last 150 years they have transformed our physical environment our material culture our manner of living and even our persons and they are continuing to do so in profound ways Yet the detailed and systematic study of the history of the modern chemical sciences has been relatively late in coming This compilation of essays by leading scholars represents the first fruits of modern historical scholarship The essays vary in form and content some represent detailed original research others are cast as synoptic blueprints for future research in major domains of scholarship still others are provocative reflections on the opportunities and challenges facing historians of chemical sciences and industries and their audiences The essays in Part One deal with the experimental generation of new chemical knowledge the nature of theories about chemical knowledge and the reception of new knowledge by the chemical community Part Two is devoted primarily to the development of modern industrial chemistry Part Three is concerned with preserving archives and artifacts owned by public and private institutions with making the history of chemistry accessible to persons interested but not trained in history and with helping both policymakers and the general public to understand the policy issues involving the chemical sciences and industries through the insights provided by historical research Part Four the concluding section discusses future prospects for the history of the chemical sciences addressing questions about methodology audience and new directions for research *A Science of Impurity* Christopher Hamlin,1990-01-01 **Routledge Library Editions: Education Mini-Set O Teaching and Learning 14 vols**

Various,2021-12-02 Originally published between 1973 and 1993 the 14 books in this set discuss a number of themes such as

policy practice and evaluation in schools dealing with disruptive behaviour issues regarding the teaching of arts and sciences ethnographic studies of life in primary and secondary schools and critical events in teaching and learning Handbook of Research methods and Applications in Environmental Studies Matthias Ruth,2015-08-28 This Handbook presents methods to advance the understanding of interdependencies between the well being of human societies and the performance of their biophysical environment It showcases applications to material and energy use urbanization and tech **Handbook of Science and Technology Studies** Sheila Jasanoff,1995 Sponsored by the Society for Social Studies of Science this comprehensive resource defines summarizes and synthesizes the advances made in the social scientific humanistic and policy studies of science and technology In 28 chapters contributors from ten countries and a dozen different academic disciplines provide not only traditional syntheses Science and Sociological Practice Steven Yearley,1984 **University and Society** Martin A. Trow,Thorsten Nybom,1991 This collection of essays addresses the question of the role of research and higher education in society both today and in a historical perspective *The Social Construction of Lesbianism* Celia Kitzinger,1987 The old model of lesbianism as a pathological affliction has largely given way to a liberal social scientific one which presents it as an alternative lifestyle a way of loving a sexual preference or a source of personal fulfilment This book argues that the shift from pathological to gay affirmative research merely substitutes one depoliticized construction of the lesbian for another The author contends that the liberal social construction instead of furthering the liberation of women represents a new development in the oppression of women in general and lesbians in particular Gay affirmative constructions are fundamentally incompatible with radical feminist theory in which lesbianism is a political statement representing the bonding of women against male supremacy Kitzinger urges researchers to reject the traditional model of science as an objective search for truths or facts but instead to examine their own rhetoric and evaluate their political commitments From publisher s description **Argumentation and Advocacy** ,1997 *Issues in Education Research* Ellen Condliffe Lagemann, Lee S. Shulman,1999-06-29 More than twenty prominent scholars examine education research and discuss how it is changing and where it needs to go They highlight some of the major trends that have galvanized the field including removing research from the laboratory to the school site qualitative research as a widely validated method and the increasing interdisciplinary aspect of educational research Environment, Society and Natural Resource Management Geoffrey Lawrence,Vaughan Higgins,Stewart Lockie,2001 As greater significance is placed on the relationship between people and their environment it is increasingly acknowledged that few environmental problems can be solved without considering the social context in which they arise But what does it mean to incorporate the social and what types of social sciences are needed This incisive book critically reviews the theoretical perspectives that underlie social scientific contributions to natural resource management and argues for both a greater social science presence and for conceptual and methodological clarity within the social sciences themselves The expert contributors explore how new concepts and approaches can contribute

positively to natural resource management They demonstrate how the social sciences can be used as a vehicle to highlight social concerns as well as to foster greater participation co operation and integration among community members natural resource managers and researchers Through detailed case studies from Australasia and the Americas the authors illustrate how different social science perspectives can be utilised The range and variety of views provide a basis for the evaluation of various and often competing disciplinary paradigms within the social sciences This book will undoubtedly contribute to a more sophisticated debate about the place of the social in environmental research It will prove to be of great worth to students and researchers of environmental and social issues to those involved in environmental decision making and community planning as well as environmental policymakers and natural resource managers
