### **Children's Ideas in Science**

Rosalind Driver,1985-06-16 Children arrive in their science classrooms with their own ideas and interpretations of the phenomena they are to study even when they have received no systematic instruction in these subjects whatsoever These ideas and interpretations are a natural result of everyday experience of practical physical activities of talking with other people and of the media This book documents and explores the ideas of school students aged 10 16 about a range of natural phenomena such as light heat force and motion the structure of matter and electricity It also examines how students conceptions change and develop with teaching The editors have brought together science educators who come from different parts of the work but whose work is focused on the same determination to bring insight into the conceptual world of children in science classrooms insight which will be helpful in making science teaching and learning more rewarding for teachers and children alike

*Teaching Children Science* Joseph Abruscato,2000 This revision of a very successful science methods text includes coverage of methods activities and science content Teaching Children Science presents current ideas about teaching children science in a motivating engaging style that will positively draw students towards the teaching of science to young children There are nine basic science teaching methods chapters and three potentially free standing parts that focus respectively on how to teach Earth Space Life and Physical Science content Each of these three parts has a lesson and unit plan followed by chapters that provide science content and chapters that contain activities and demonstrations for children Through its structure writing style and attention to contemporary issues this volume serves as an important resource in teaching students to create science experiences within the context of discovery learning thereby providing students with the necessary skills and knowledge to fully comprehend that they will be teaching children science not the other way around For readers with an interest in science and perhaps drawing children to the teaching of science as a career choice

**Atmosphere: Earth Science Children's Book With Facts And Pictures** Bold Kids,2022-03-07 Did you know that the atmosphere is made up of different layers In fact this layer is a huge part of our planet supporting all life forms And you might not know the atmosphere also plays a vital role in determining the weather The following facts will help you better

understand this fascinating element But before you can get started with these fascinating facts here are a few things you should know about the atmospheric layers The first layer of the atmosphere is called the troposphere which is about 500 800 km high It is a dense environment with a large number of gas molecules and dust pbooks and can reach temperatures of 1700 degrees Celsius In fact the atmosphere s composition changes over the course of millions of years and there are currently several different layers Learn about the different layers of our atmosphere and how they influence our daily lives The atmosphere contains a wide range of gases but two of them are the most important Oxygen and nitrogen are the most abundant gases in the atmosphere while other gases are present in trace amounts The different layers of the atmosphere have different temperatures and densities and they play a critical role in keeping our world cool And remember there are five different layers to the atmosphere The thickness and density of the layers vary and affect the way our planet experiences weather
