The superconductors which strictly follow the Meissner effect are called type I superconductors. The typical magnetic behaviour of lead, a type I superconductor, is shown in Fig. 4.5. These superconductors exhibit perfect diamagnetism below a critical field H_c which, for most of the cases, is of the order of 0.1 tesla. As the applied magnetic field is increased beyond H_c , the field penetrates the material completely and the latter abruptly reverts to its normal resistive state. These materials give away their superconductivity at lower field strengths and are referred to as the soft superconductors. Pure specimens of various metals exhibit this type of
