"If applied researchers could more adequately critique the studies cited within their own literature reviews, they also would be able to apply such knowledge to their own investigations" –Huck (2008, xviii).

"Reading statistics and research" is one of the reader friendliest premium reference sources on research statistics helping both those who conduct their own research studies, and those who do not specifically engage in research studies but do have to encounter, decipher and critique the results of other researcher's investigations.

The book is written by Schuyler Huck, Distinguished professor and Chancellor's Teaching Scholar at the University of Tennessee, Knoxville. Huck's applied and theoretical work has been cited by scholars in

approximately 350 different academic journals. He reflects his concerns for improving statistical instruction and helping research consumers to evaluate research reports in his books, journal articles, convention presentations, and on his website (www.readingstats.com).

The book is published by the leading publisher in the field of education, Pearson, which provides quality education solutions through its renowned imprints such as Addison-Wesley, Allyn & Bacon, Benjamin Cummings, Longman, Prentice Hall, and several others. The book is consisted of 544 pages (+xvi) covering 19 chapters. It is integrated with the Research Navigator™ through fun end-of-chapter exercises and icons in the margins next to important terms used in the e-articles of different disciplines. Followed by a quite reader friendly and appealing preface indicating the objectives of the new edition along with the differences between the new edition and the previous edition, a section on how to use the Research Navigator™ is included. Purchasers of a new copy (rather than a used copy) are able to get their unique access codes to register for Research Navigator™.

Chapters covered are 1) the typical format of a journal article, 2) descriptive statistics: the univariate case, 3) bivariate correlation, 4) reliability and validity, 5) foundations of inferential statistics, 6) estimation, 7) hypothesis testing, 8) effect size, power, CIs, and Bonferroni, 9) statistical inferences concerning bivariate correlation coefficients, 10) inferences concerning one or two means, 11) tests on three or more means using a one-way ANOVA, 12) post hoc and planned comparisons, 13) two-way analyses of variance,
