The philosophy of perception is a microcosm of the metaphysics of mind Its central problems What is perception What is the nature of perceptual consciousness How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world are at the heart of metaphysics Rather than try to cover all of the many strands in the philosophy of perception this book focuses on a particular orthodoxy about the nature of visual perception The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver The orthodox view of perception is that it is a process whereby the brain or a dedicated subsystem of the brain builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject there is a particular set of neurons whose activities are sufficient for the occurrence of that state Some of the essays in this book defend the orthodoxy most criticize it and some propose alternatives to it Many of the essays are classics Contributors G E M Anscombe Dana Ballard Daniel Dennett Fred Dretske Jerry Fodor H P Grice David Marr Maurice Merleau Ponty Zenon Pylyshyn Paul Snowdon and P F Strawson **Perception** Adam Greenberg, Peter Lenz, 2025-10-27

Through a collection of carefully curated articles Perception Readings on Vision Audition Pain and Attention introduces readers to the intricate world of human perception combining traditional approaches and modern scientific methods This anthology examines the complex interplay between various sensory experiences such as vision hearing and the chemical senses of taste and smell It provides readers with an understanding of how we decipher and interact with the world around us Structured to explore distinct yet interconnected sensory mechanisms the content unravels the sensory aspects along with their relevant stimuli while also discussing how perception shapes individual cognitive and affective experiences The text focuses on the neural and psychophysical underpinnings of perception offering insights into how these processes are implemented in the brain and the broader implications for human cognition and behavior Designed

for use at all academic levels Perception is particularly apt for classes that aim to provide students with a comprehensive understanding of sensory processing and perception Perceiving, Sensing, and Knowing Robert J. Swartz, 1955
