Raise Specification Language:

The RAISE Specification Language RAISE Language Group,1992 Written with a tutorial section meant for self study as well as a reference section this book is designed for those who use or who plan to use RAISE as well as for those who would like to explore formal methods and specification It includes numerous examples of the use of RSL and an index

Specification Case Studies in RAISE Hung Dang Van,2002-02-08 This volume presents twelve case studies that use RAISE Rigorous Approach to Industrial Software Engineering to construct analyse develop and apply formal specifications The case studies cover a wide range of application areas including government finance case based reasoning multi language text processing object oriented design patterns component based software design and natural resource management By illustrating the variety of uses of formal specifications the case studies also raise questions about the creation purpose and scope of formal models before they are built Additional resources and complete specifications for all of the case studies and the RAISE tools used to process them are available on the World Wide Web This book will be of particular interest to software engineers especially those responsible for the initial stages of requirements engineering and software architecture and design It will also be of interest to academics and students on advanced formal methods courses Logics of Specification Languages Dines Bjørner,Martin C. Henson,2007-12-05 This book presents comprehensive studies on nine specification languages and their logics of reasoning The editors and authors are authorities on these specification languages and their application In a unique feature the book closes with short commentaries on the specification languages written by researchers closely associated with their original development The book contains extensive references and pointers to future developments Semantics of Specification Languages (SoSL) Derek J. Andrews,Jan F. Groote,C.A. Middelburg,2012-12-06 SoSL was the first International Workshop on Semantics of Specification Languages held from 25 27 October 1993 in Utrecht the Netherlands The workshop was organized by the Department of Philosophy of Utrecht University with financial support from the Nationale Faciliteit Informatica of the Nederlandse Organisatie voor Wetenschappelijk Onderzoek NWO and under the auspices of the British Computer Society S specialist group in Formal Aspects of Computing Science BCS FACS The concern of the workshop was the semantics of specification languages and the issues closely related to this area such as type checking and the justification of proof rules and proof obligations Its aim was the exchange of problems and ideas in this field of formal methods and the identification of common programs of work for further investigation The program of SoSL consisted of 3 invited lectures presenting the developments of the semantics of 3 major specification languages Furthermore there were 16 presentations of submitted papers This volume provides a direct account of the workshop It contains 3 papers that match the invited lectures and the 16 selected papers The editors want to thank all those who have contributed to the workshop the Program Committee and the referees for selecting the contributed papers the invited speakers for their interesting talks the Organizing Committee for all their efforts and of course the participants We have the feeling that the

workshop was worthwhile and should be repeated

VDM '91. Formal Software Development Methods. 4th International Symposium of VDM Europe, Noordwijkerhout, The Netherlands, October 21-25, 1991. Proceedings Soren Prehn,Hans Toetenel,1991-10-14 The proceedings of the fourth Vienna Development Method Symposium VDM 91 are published here in two volumes Previous VDM symposia were held in 1987 LNCS 252 1988 LNCS 328 and 1990 LNCS 428 The VDM symposia have been organized by the VDM Europe formed in 1985 as an advisory board sponsored by the Commission of the European Communities The VDM Europe working group consisted of researchers software engineers and programmers all interested in promoting the industrial usage of formal methods for software development The fourth VDM symposium presented not only VDM but also a large number of other methods for formal software development Volume 1 contains the conference contributions It has four parts contributions of invited speakers papers project reports and tools demonstration abstracts The emphasis is on methods and calculi for development verification and verification tools support experiences from doing developments and the associated theoretical problems Volume2 contains four introductory tutorials on LARCH Refinement Calculus VDM and RAISE and four advanced tutorials on ABEL PROSPECTRA THE B Method and The Stack They present a comprehensive account of the state of the art

The RAISE Specification Language Dines Bjørner (et al.),1991 Domain Modeling and the Duration Calculus Chris George,Zhiming Liu,Jim Woodcock,2007-08-29 This book presents thoroughly revised tutorial papers based on lectures given by leading researchers at the International Training School on Domain Modeling and the Duration Calculus held in Shanghai China as an associated event of ICTAC 2007 Topics addressed in detail are development of real time systems domain engineering using abstract modeling the area of duration calculus and formal methods like language description using the operational semantics approach

Formal Methods at the Crossroads. From Panacea to Foundational Support Bernhard K. Aichernig,Thomas S. E. Maibaum,2003-11-18 This volume is devoted to the 10th Anniversary Colloquium of UNU IIST the International Institute for Software Technology of the United Nations University as well as to the memory of Armando Haeberer who passed away while he was working on the preparation of this book in February 2003 The volume starts with a special paper by Tom Maibaum recollecting Armando Haeberer s life and work The second part presents work done by members of UNU IIST as well as a paper on the history of the institute The subsequent topical sections present key contributions by leading researchers and thus assess the state of the art in software engineering and its engineering and scientific principles from models to software real time systems and verification All in all the book is a unique survey of the power and potential of formal methods in software engineering

Domain Science and Engineering Dines Bjørner,2021-11-08 In this book the author explains domain engineering and the underlying science and he then shows how we can derive requirements prescriptions for computing systems from domain descriptions A further motivation is to present domain descriptions requirements prescriptions and software design specifications as mathematical quantities The author s maxim is that before software can be designed we must understand its

requirements and before requirements can be prescribed we must analyse and describe the domain for which the software is intended He does this by focusing on what it takes to analyse and describe domains By a domain we understand a rationally describable discrete dynamics segment of human activity of natural and man made artefacts examples include road rail and air transport container terminal ports manufacturing trade healthcare and urban planning The book addresses issues of seemingly large systems not small algorithms and it emphasizes descriptions as formal mathematical quantities This is the first thorough monograph treatment of the new software engineering phase of software development one that precedes requirements engineering It emphasizes a methodological approach by treating in depth analysis and description principles techniques and tools It does this by basing its domain modeling on fundamental philosophical principles a view that is new for a computer science monograph The book will be of value to computer scientists engaged with formal specifications of software The author reveals this as a field of interesting problems most chapters include pointers to further study and exercises drawn from practical engineering and science challenges The text is supported by a primer to the formal specification language RSL and extensive indexes

The RAISE Development Method ,1995 This guide provides guidelines for the initial specification systems their decomposition into components and the development and translation to target code of these components Several of these techniques can be used with other formal methods

ESPRIT '87 Commission of the European Communities. Directorate-General for Telecommunications, Information Industries, and Innovation,1987

Hardbound Reports on the achievements and impact of selected ESPRIT projects are presented in these volumes The majority of the papers cover the subjects of microelectronics and peripherals technology advanced information processing office systems and computer integrated manufacturing In addition there is one session on the network development projects of ESPRIT A good balance exists between the various specialised areas and also across different European national boundaries

Industrial Applications of Formal Methods to Model, Design and Analyze Computer Systems Dan Craigen,Susan Gerhart,1995-01-15 Formal methods are mathematically based techniques often supported by reasoning tools that can offer a rigorous and effective way to model design and analyze computer systems The purpose of this study is to evaluate international industrial experience in using formal methods The cases selected are representative of industrial grade projects and span a variety of application domains The study had three main objectives To better inform deliberations within industry and government on standards and regulations To provide an authoritative record on the practical experience of formal methods to date and To suggest areas where future research and technology development are needed This study was undertaken by three experts in formal methods and software engineering Dan Craigen of ORA Canada Susan Gerhart of Applied Formal Methods and Ted Ralston of Ralston Research Associates Robin Bloomfield of Adelard was involved with the Darlington Nuclear Generating Station Shutdown System case Support for this study was provided by organizations in Canada and the United States The Atomic Energy Control Board of Canada AECB provided support for Dan Craigen and for

the technical editing provided by Karen Summerskill The U S Naval Research Laboratories NRL Washington DC provided support for all three authors The U S National Institute of Standards and Technology NIST provided support for Ted Ralston
