Radiation Protection:

Radiation Protection for Medical and Allied Health Personnel National Council on Radiation Protection and Measurements, 1989 **Radiation Protection** Jacob Shapiro, 2002 This highly successful manual has served for nearly three decades as the definitive guide to the safe use of radioactive materials Completely revised and updated the fourth edition presents a new dimension by adding coverage of nonionizing radiation and is thus concerned with the entire field of radiation protection The author takes the novel approach of introducing the whole range of energies possessed by particles and electromagnetic waves at the beginning of the text thus integrating coverage of ionizing and nonionizing radiation rather than considering them as two separate disciplines He goes on to cover the entire spectrum of radiation sources including radionuclides x ray machines accelerators nuclear reactors power lines microwave towers and cellular phones With its expanded coverage including a broader focus on public health issues this new volume will serve as an important training and reference resource not only for research scientists physicians and engineers but for regulatory officials attorneys engineers and environmental health and safety professionals The breadth of citations alone makes this resource invaluable

Radiation Protection Jacob Shapiro, 1990 TechCareers Graphic Design explores the career potential in the centuries old tradition of graphic design and printing It provides insight into what the future might hold for those interested in entering the field With sections on education and training requirements as well as job descriptions and salary ranges TechCareers Graphic Design is a great resource for anyone considering a career in the business Radiation Protection In The Health Sciences (With Problem Solutions Manual) (2nd Edition) Marilyn E Noz, Gerald Q Maguire Jr, 2007-04-12 This book takes a very practical approach to radiation protection and presents very readable information for anyone working in the radiation field or with radioactive material Offering information rarely found elsewhere the authors describe in detail both the basic principles and practical implementation recommendations of radiation protection Each chapter includes self assessment review questions and problems with answers provided to help readers master important information Coupled with a teacher s manual this book is highly suitable as an undergraduate text for students preparing for careers as X ray radiation oncology or nuclear medicine technologists It can also be used as a reference for residents in radiology and radiation oncology medical personnel or anyone working with radioactive materials such as those involved in homeland security emergency services or employed at a nuclear power plant **Radiation Protection for Medical and Allied Health Personnel** National Council on Radiation Protection and Measurements, 1976 In hospital radiation facilities of all types safety procedures for protecting radiation workers and the general public must be carefully planned and supervised and controlled by a qualified staff member To meet currently accepted standards for protection the potential exposures of workers and anyone else in or near a radiation area are evaluated and precautions taken to avert the possibility of exceeding or even approaching the permissible radiation levels Radiation workers employed in these facilities are informed about these safety procedures However there are

various individuals involved in the delivery of medical care or in research who are not usually categorized as radiation workers. Their duties may occasionally take them into areas where radiation or radioactive materials are present. For want of a better term we may group many of these individuals under the title of allied health personnel. Among these are physicians, nurses, technicians, and others who are not classified as radiation workers but who occasionally have to deal with radioactive materials or with patients who have received radiopharmaceuticals. In addition, there are others not directly involved in the care of patients or research who may incidentally be exposed to radiation in the course of their work. Such, for instance, are personnel in institutional shipping and receiving rooms and those engaged in hospital maintenance work. Many of these people are concerned about radiation hazards and often suffer misconceptions regarding the subject. They sometimes work without instruction or guidance. Sometimes they seek out someone to ask questions about radiation and do receive from them careful answers to their questions. Too often, however, they are simply told that everything is all right and that they have no cause to worry. One purpose of this report is to note the types of problems encountered and try to give approaches to handling them. The Radiation Protection Supervisor is usually aware of potential hazards within an institution but sometimes the problems are not evident even to him.

From Preface pages iii-iv **Radiation Protection** Gyoujin Cho, 2013-10-02

Radiation Protection: A Systematic Approach to Safety is a collection of papers that deals with the control, management, and prevention of toxic agents. One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure. Another paper cites the radiation protection aspects practiced in the decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel. One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere. These routes include: 1. inhalation of the material from the initial cloud or that arising from the ground; 2. external irradiation from radioactive decay of the material in the cloud or in the air; 3. and as ingestion of radionuclides transferred through the food chain. One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents. The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level. The collection will prove useful for nuclear physicists and scientists, occupational health professionals, and researchers in the field of nuclear medicine and engineering.
