Cultures of Peace Elise Boulding,2000-05-01 Renowned sociologist Elise Boulding offers an eminent collection of essays that emphasizes her study of civil society over the past fifty years While most media and academic attention focuses on the extreme violence in today s society Elise Boulding notes an equally significant presence of cultures and societies of peace Here in a volume that represents a life s work she revisits her theme of the connection among family community and government and offers enriching perspectives and advice on how to fuel the process of peace Boulding examines structural violence in terms of the major institutional obstacles to a more peaceful future the tension between the states and the people trapped inside them the tension between the techno sphere and the biosphere and between global systems and local know how She describes social movements around the world that are developing alternative ways of handling the great diversity of human biospheric needs on the planet In addition Boulding brings together her experiences to empower the peace building activities if we are to do better in the twenty first century than we have done in the twentieth century Provided by publisher

Perelman,2016-09-27 This book describes how corporate powers have erected a rapacious system of intellectual property rights to confiscate the benefits of creativity in science and culture This legal system threatens to derail both economic and scientific progress while disrupting society and threatening personal freedom Perelman argues that the natural outcome of this system is a world of excessive litigation intrusive violations of privacy the destruction system of higher education interference with scientific research and a lopsided distribution of income

The Age of Access Jeremy Rifkin,2001-03-05 Visionary activist and author Jeremy Rifkin exposes the real stakes of the new economy delivering the clearest summation yet of how the Internet is really changing our lives The Seattle Times Imagine waking up one day to find

that virtually every activity you engage in outside your immediate family has become a paid for experience It s all part of a fundamental change taking place in the nature of business contends Jeremy Rifkin After several hundred years as the dominant organizing paradigm of civilization the traditional market system is beginning to deconstruct On the horizon looms the Age of Access an era radically different from any we have known Discoverability Lorenzo Magnani,2022-05-20 The book analyses the concept of discoverability and some current epistemological problems related to it with a special attention to science It shows that discoverability is closely related to the sustainability of human creativity in an eco cognitive perspective Advocating the need of an integral ecology and leveraging the important concept of abduction it demonstrates that an ecology of human creativity should have priority over other needs i e that the first ecological duty is to protect and sustain discoverability Enhancing discoverability will protect human creativity and it is exactly human creativity a form of innovative abductive cognition that can promote the implementation of the other kinds of ecology The author guides readers through a comprehensive discussion on the concept of discoverability eco cognitive situatedness and eco cognitive openness and closure alike By describing some key real world examples he highlights the main challenges that are currently posed to human creativity and epistemic integrity He also describes future eco cognitive settings discussing the problem of overcomputationalism and suggesting a reinterpretation of the role of human knowledge Overall this book fills an important gap in the literature on the nexus abduction creativity discovery offering a source of inspiration to philosophers epistemologists and cognitive scientists Yet it also addresses researchers in other disciplines interested in the problems of scientific discovery and epistemic integrity of research **The Abductive Structure of Scientific Creativity** Lorenzo Magnani,2017-08-29 This book employs a new eco cognitive model of abduction to underline the distributed and embodied nature of scientific cognition Its main focus is on the knowledge enhancing virtues of abduction and on the productive role of scientific models What are the distinctive features that define the kind of knowledge produced by science To provide an answer to this question the book first addresses the ideas of Aristotle who stressed the essential inferential and distributed role of external cognitive tools and epistemic mediators in abductive cognition This is analyzed in depth from both a naturalized logic and an ecology of cognition perspective It is shown how the maximization of cognition and of abducibility two typical goals of science are related to a number of fundamental aspects the optimization of the eco cognitive situatedness the maximization of changeability for both the input and the output of the inferences involved a high degree of information sensitiveness and the need to record the past life of abductive inferential practices Lastly the book explains how some impoverished epistemological niches the result of a growing epistemic irresponsibility associated with the commodification and commercialization of science are now seriously jeopardizing the flourishing development of human creative abduction **New Scientist** ,1999 **The Writers Directory 2008** Michelle Kazensky,2007-06 Features bibliographical biographical and contact information for living authors worldwide who have at least one English publication Entries include
