Radar Scattering From Modulated Wind Waves:

Radar Scattering from Modulated Wind Waves G.J. Komen, W.A. Oost, 2012-12-06 Ten years ago de Loor and co-workers at TNO The Netherlands were the first to report bottom topography patterns in real aperture radar RAR images of the southern North Sea. At that time this was a real puzzle. The skin depth of microwaves for sea water is only of the order of centimeters while the sea bottom is about 20 meters below the surface. Electromagnetic radiation therefore cannot probe the bottom directly. Similar phenomena were found in radar imagery from SEASAT and SIR A/B synthetic aperture radars SARs of Nantucket Shoals, the English Channel and many other coastal areas. Since then theory and ocean field experiments (Le Phelps Bank, Georgia Straits, SARSEX, TOWARD, FASINEX, etc.) have advanced our understanding considerably. We now know that these surface signatures are the results of surface currents perturbed by the bottom topography which refract the propagation and modulate the energy of short surface waves so as to cause microwave backscatter power variations. Hence any large scale ocean features containing nonuniform surface currents (i.e. internal waves, eddies, fronts, etc.) will cause similar manifestations in the radar imagery by means of current wave microwave interactions. Observations confirm this. [Radar Scattering from Modulated Wind Waves; Proceedings of the Workshop on Modulation of Short Wind Waves in the Gravity-Capillary Range by Non-Uniform Currents, Bergen Aan Zee, The Netherlands, 24-26 May 1988](#) G. J. Komen, [A Study of Capillary and Capillary-gravity Wind Waves](#) Xin Zhang, 1993 *Measuring the Oceans from Space* Ian S. Robinson, 2004-06-30 This book covers the fundamental principles of measuring oceans from space and also contains state of the art developments in data analysis and interpretation and in sensors. Completely new will be material covering advances in oceanography that have grown out of remote sensing including some of the global applications of the data. The variety of applications of remotely sensed data to ocean science has grown significantly and new areas of science are emerging to exploit the global datasets being recovered by satellites particularly in relation to climate and climate change basin scale air sea interaction processes (e.g. El Niño) and the modelling forecasting and prediction of the ocean. **Meteorological and Geostrophical Abstracts**, 1997 *Coastal Processes III* G. R. Rodriguez, 2013 Containing papers presented at the Third International Conference on Physical Coastal Processes Management and Engineering this book examines coastal zone dynamics which involve complex interactions between the atmosphere, ocean and land. Management of coastal zones is dependent on a number of factors. Large temporal and spatial differences in air sea exchange processes and wind strength and direction result from the complex interactions referred to above. Recreational and tourism activities make demands on coastal areas. With the number and frequency of extreme events due to increases with climate change their role in changing coastal zones also needs to be considered. The book considers also of these and covers such topics as Wave modelling Hydrodynamic modelling Effects of climate change in coastal zones Coastal defences Energy recovery Sediment transport and erosion Pollution and water quality Planning and beach design Coastal morphology Coastal processes and navigation
