

## Holographic systems, components and applications

IEE Conference Publication 311  
1989, 235pp., £4

It could be argued that in the last few years holography has come of age. Not only are there now numerous applications of the holographic technique, but also, with present-day optical equipment, the making of holograms has been much simplified and much of the mystique taken out of its practical implementation. There are now many engineering applications of holography, and this book, which reports a conference on 'Holographic systems, components and applications' held in Bath in September of last year, is concerned with this general subject area. The book consists of about 50 papers grouped into six topics.

The first topic is holographic measurement, one of the more established application areas, and is concerned with analysis of deformation and vibration of structures. Then display holography, the application most widely known to the general public, is briefly considered, including methods of replication and also full-colour holographic displays. The next four areas are perhaps of more interest to readers of *IEE Review* because of the connections with optical communications and optical computing.

Computer-generated holograms are created, not using optical interference, but by direct calculation. This adds greatly to the flexibility of the effects produced when reconstructed using optical illumination. Photorefractive and phase conjugation are techniques using special media which are widely considered to be a form of real-time holography and which therefore

## The new masters — can the West match Japan? Phillip Oppenheim

Hutchinson Business Books, 1991, 431pp., £20

During the early 1980s, when I was responsible for the research activities of Philips in the UK, it fell to my lot to accompany Sir Peter Carey to meet the Philips board in Eindhoven. As Permanent Secretary at the Department of Trade & Industry, he had been the architect of government policy to attract Japanese manufacturing industry into the UK. Philips was then anxious to dispute with him the wisdom of what it, and many others in Europe, saw as a Trojan-horse policy which would undermine our efforts to compete with Japan in world markets.

Not long after, when launching the CD player, Philips recognised that accommodation with Japan was imperative if this latest European innovation was not to suffer the fate of the VCR and the laser disc — both Philips inventions outflanked by the Japanese.

Building industrial strength in partnership with Japanese business is no longer a controversial policy nor an unspeakable betrayal; it is widely accepted as an appropriate response to the seemingly remorseless advance of Japanese enterprise. It is certainly more likely to succeed for many of our industries in Britain today than full blooded confrontation or erecting a ring-fence of protection around

Europe.

Over the past two decades, we have seen company after company in the West fall like ninepins to the Eastern assault. If you are Japanese, you will find very cheerful reading in the unrelenting catalogue which Phillip Oppenheim provides of these events; if you are not, it is a sorry tale. Anecdote and circumstance are piled, one upon the other, to fill much of the book, pressing home his answer to the question posed in its title. No real prospect of redemption is offered to British industry, and little serious attempt is made to suggest remedies. The short final chapters which aim to address the issue of recovering our industrial position are not much help.

Mr. Oppenheim has written a well researched book, based on his wide experience. There is much detail in it of the industrial struggle in which we have been engaged. He is rightly concerned that we face up to the stark reality of our dilemma, and do not hide behind comfortable excuses.

In seeking to turn the tide, it is certainly important to recognise that Japanese industry has succeeded because it has been better than its European counterparts. Phillip Oppenheim properly points out that their success has not

depended on protectionist policies, nor devious trade practices, as we in the West have so frequently asserted. Europe has also been guilty of protectionist policies aimed at restraining Japanese encroachment. It is equally wrong to suggest, as he appears to believe, that Japan should be seen as a poor country struggling to come to terms with its collective neuroses, and more sinned against than sinner. Thus, Japanese farming subsidies are acceptable to Mr. Oppenheim on the basis that their farmers would otherwise be bankrupted; the same understanding is not accorded European or American manufacturing industry.

Again, he equates the Japanese bribery of FBI officials to steal IBM software with Kodak infringing Polaroid camera patents. Such questionable apologetics are not helpful in illuminating a problem that is eroding our industrial base and threatening our economic future.

As a necessary cold shower before undertaking the rigours of industrial battle, I recommend reading the occasional chapter of this book. If you seek a handbook of the martial arts that will help you succeed against an implacable foe, I would go elsewhere.

B.W. MANLEY, FEng

have widespread application in the processing of information. Holographic optical elements allow cheap and lightweight components to be produced for focusing, splitting and spectral filtering of light. The last section is on optical interconnects, which offer great possibilities in optical computing for inter-

connecting large numbers of ports. Finally, the book finishes with several poster papers covering the previous topics.

The book has a number of very interesting and up-to-date papers. As in any multi-author collection, there is variability of style, but overall the book is

very readable for those with some previous knowledge of the subject. It is therefore to be recommended for those wishing to acquaint themselves with what can now be accomplished using this technique, which will be of growing importance in the future.
