phenomenon known as the wisdom of the inner crowd In this article we find that this effect hinges on whether people explicitly decide in which direction their first guess had erred before making their second guess In nine studies N 8 465 we found that asking people to explicitly indicate whether their first guess was too high or too low prior to making their second guess made people more likely to provide a second guess that was more extreme in the same direction than their first guess As a consequence the introduction of that Too High Too Low question reduced and sometimes eliminated or reversed the wisdom of the inner crowd effect for the majority of questions with non extreme correct answers and increased the wisdom of the inner crowd effect for questions with extreme correct answers Our findings suggest that the wisdom of the inner crowd effect is not inevitable but rather that it depends on the processes people use to generate their second guesses
