**Parallel Architectures and Their Efficient Use** Friedhelm Meyer auf der Heide, Burkhard Monien, Arnold L. Rosenberg, 1993-06-29 Research in the field of parallel computer architectures and parallel algorithms has been very successful in recent years and further progress is to be expected On the other hand the question of basic principles of the architecture of universal parallel computers and their realizations is still wide open The answer to this question must be regarded as most important for the further development of parallel computing and especially for user acceptance The First Heinz Nixdorf Symposium brought together leading experts in the field of parallel computing and its applications to discuss the state of the art promising directions of research and future perspectives It was the first in a series of Heinz Nixdorf Symposia intended to cover varying subjects from the research spectrum of the Heinz Nixdorf Institute of the University of Paderborn This volume presents the proceedings of the symposium which was held in Paderborn in November 1992 The contributions are grouped into four parts parallel computation models and simulations existing parallel machines communication and programming paradigms and parallel algorithms

**Network Flows and Matching** David S. Johnson, Catherine C. McGeoch, Interest has grown recently in the application of computational and statistical tools to problems in the analysis of algorithms In many algorithmic domains worst case bounds are too pessimistic and tractable probabilistic models too unrealistic to provide meaningful predictions of practical algorithmic performance Experimental approaches can provide knowledge where purely analytical methods fail and can provide insights to motivate and guide deeper analytical results The DIMACS Implementation Challenge was organized to encourage experimental work in the area of network flows and matchings Participants at sites in the U S Europe and Japan undertook projects between

November 1990 and August 1991 to test and evaluate algorithms for these problems The Challenge culminated in a three day workshop held in October 1991 at DIMACS This volume contains the revised and refereed versions of twenty two of the papers presented at the workshop along with supplemental material about the Challenge and the Workshop Parallel Architectures and Compilation Techniques Michel Cosnard, Guang R.
