With dozens of practical labs, you'll be able to decide for yourself which new aspects of Excel will be useful or not in your own work. And best of all, you won't have to buy an expensive revision of a legacy Excel programming tutorial to learn about the new features if they're covered there at all.

Each chapter is organized into a collection of labs, each of which addresses a specific programming problem. You can follow along to complete the lab on your own or jump ahead and use the samples the author has built for you.

The new **Developer's Notebooks** series from O'Reilly covers important new tools for software developers. Emphasizing example over explanation and practice over theory, they focus on learning by doing. You'll get the goods straight from the masters in an informal and code-intensive style that suits developers. If you've been curious about Excel 2003 but haven't known where to start, this no-fluff lab-style guide is the solution.

Dictionary of XML Technologies and the Semantic Web Vladimir Geroimenko, 2012-12-06

The emerging Second Generation Web is based entirely on XML and related technologies. It is intended to result in the creation of the Semantic Web on which computers will be able to deal with the meaning semantics of Web data and hence to process them in a more effective and autonomous way. This new version of the Web introduces a multitude of novel concepts, terms, and acronyms: Purpose, Scope, and Methods. This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies. The ultimate goal of this dictionary is even broader than just to define the meaning of new words; it aims to develop a proper understanding of these leading-edge technologies. To achieve this, comprehensible definitions of technical terms are supported by numerous diagrams and code snippets, clearly annotated and explained. The main areas covered in this dictionary are:

- 1 XML syntax and core technologies such as Namespaces, Infoset, and XML Schema
- 2 all the major members of the XML family of technologies such as XSLT, XPath, and XLink
- 3 numerous XML-based domain-specific languages such as NewsML, News Markup Language
- 4 the concept and architecture of the Semantic Web
- 5 key Semantic Web technologies such as RDF, Resource Description Framework, RDF Schema, and OWL, Web Ontology Language
- 6 Web services including WSDL, Web Services Description Language, and SOAP, Simple Object Access Protocol
