Robust Control Systems With Genetic Algorithms:

Robust Control Systems with Genetic Algorithms Mo Jamshidi, Renato A. Krohling, Leandro dos S. Coelho, Peter J. Fleming, 2018-10-03 In recent years new paradigms have emerged to replace or augment the traditional mathematically based approaches to optimization The most powerful of these are genetic algorithms GA inspired by natural selection and genetic programming an extension of GAs based on the optimization of symbolic codes Robust Control Systems with Genetic Algorithms builds a bridge between genetic algorithms and the design of robust control systems After laying a foundation in the basics of GAs and genetic programming it demonstrates the power of these new tools for developing optimal robust controllers for linear control systems optimal disturbance rejection controllers and predictive and variable structure control It also explores the application of hybrid approaches how to enhance genetic algorithms and programming with fuzzy logic to design intelligent control systems The authors consider a variety of applications such as the optimal control of robotic manipulators flexible links and jet engines and illustrate a multi objective genetic algorithm approach to the design of robust controllers with a gasification plant case study The authors are all masters in the field and clearly show the effectiveness of GA techniques Their presentation is your first opportunity to fully explore this cutting edge approach to robust optimal control system design and exploit its methods for your own applications
