**Random Functions and Hydrology** Rafael L. Bras, Ignacio Rodríguez-Iturbe, 1985 *Overexploitation and Contamination of Shared Groundwater Resources* Christophe J.G. Darnault, 2008-02-02 Forty percent of the world's population depends upon increasingly scarce and shared water resources. This situation is critical at both international and national levels not only for socio-economic development but also for the regional stability. The intensive use of groundwater for irrigation and water supply is adding pressures to scarce water resources and the environment through overexploitation and contamination which result in situations that may lead to conflicts. The book from the NATO ASI on Overexploitation and Contamination of Shared Groundwater Resources Management: Bio-technological and Political Approaches to Avoid Conflicts is written by authors from different disciplines and regions of the world. The aim of the book is to contribute to the knowledge of shared groundwater resources management to avoid conflicts by considering multi-disciplinary approaches based on effective and equitable water sharing for all water users through cooperation and within a compassionate ecological framework along with the need for sustainable resources development and the quest for environmental and human security. The scope of the book covers the hydrogeological, environmental, bio-technological and management aspects of shared groundwater resources integrating social, economic and political dimensions as well as legal and educational perspectives.

Selected Water Resources Abstracts, 1970 **Correlation Theory of Stationary and Related Random Functions** A.M. Yaglom, 2012-12-06 Correlation Theory of Stationary and Related Random Functions is an elementary introduction to the most important part of the theory dealing only with the first and second moments of these functions. This theory is a significant part of modern probability theory and offers both intrinsic mathematical interest and many concrete and practical applications. Stationary random functions arise in connection with stationary time series which are so important in many areas of engineering and other applications. This book presents the theory in such a way that it can be understood by readers without specialized mathematical backgrounds requiring only the knowledge of elementary calculus. The first volume in this two-volume exposition contains the main theory, the supplementary notes and references; the second volume consists of detailed discussions of more specialized questions, some more additional material which assumes a more thorough mathematical background than the rest of the book and numerous references to the extensive literature. Journal of Hydrometeorology, 2006 *Hydrology* Rafael L. Bras, 1990 Analysis of Water Resource Systems L. Votruba, 1988-09-01 Water resource systems research provides a basis for rational water management in large basins. The design and operation of water resource systems are both the most complicated and the most important tasks of water management. This book deals with the basic issues involved in the application of systems sciences to water management. A survey of the systems sciences, the general systems theory, cybernetics, systems engineering, operations research and systems analysis is presented as well as the methods for water resource systems analysis and for water resource systems analysis and for their evaluation. The

mathematical methods used in systems theory have been given detailed treatment Linear and dynamic programming have been used as models of optimal programming Since many practical tasks require the simulation models of water resource systems apart from their principles and a detailed description the simulation language for computing programming has been included Other methods of operations research and their application to water resource systems have been analysed and evaluated Some of these are models of inventory theory models of queuing theory graphs network analysis and some special methods like the out of kilter algorithm the chance constrained model and the chance constrained model combined with the simulation model One chapter is devoted to information and information systems in water management The final part of the book deals with prospects for water resource systems development The book is intended for engineers and decision makers involved in projects operation and research However it can be used by students in high schools technical universities and by graduate students It will serve as an up to date source of information about the principles and methodology of water resource analysis and design General Technical Report RM. ,1996

Limit Theorems for Random Fields with Singular Spectrum Nicolai Leonenko,2012-12-06 This book presents limit theorems for nonlinear functionals of random fields with singular spectrum on the basis of various asymptotic expansions The first chapter treats basic concepts of the spectral theory of random fields some important examples of random processes and fields with singular spectrum and Tauberian and Abelian theorems for covariance function of long memory random fields Chapter 2 is devoted to limit theorems for spherical averages of nonlinear transformations of Gaussian and chi square random fields Chapter 3 summarises some limit theorems for geometric type functionals of random fields Limit theorems for the solutions of Burgers equation with random data via parabolic and hyperbolic rescaling are demonstrated in Chapter 4 Lastly Chapter 5 deals with some problems for statistical analysis of random fields with singular spectrum Audience This book will be of interest to mathematicians who use random fields in engineering or other applications Nonlinear Processes in Geophysics ,2004 **Characterization and Analysis of Fire Spread Modeling Errors in an Integrated Weather/wildland Fire Model** Francis Minoru Fujioka,2001
