Rasch Models Foundations Recent Developments And Applications:

Rasch Models Gerhard H. Fischer, Ivo W. Molenaar, 2012-12-06 Thirty two years after the publication of the legendary Rasch book Rasch 1960 the rich literature on the Rasch model and its extensions was scattered in journals and many less accessible sources including grey literature When asked by students or junior researchers for references to the Rasch model it was a typical reaction on the part of the editors to state that it was difficult to name one or just a few actually only a whole list of references differing in notation and level of formal abstraction seemed to meet the request in most cases Therefore in 1992 the editors decided to invite a number of outstanding authors in the field of Rasch modeling to contribute to a book presenting the current state of knowledge about Rasch models The aim was not just to collect a number of papers on the subject rather to produce a well organized monograph To this end a workshop was held in Vienna from 25 to 27 February 1993 in which after a process of mutual reviewing drafts of all chapters were read and discussed by all authors leading to a more systematic organization of the topics treated in unified notation and terminology The workshop was sponsored by the University of Vienna here the editors would like to express their thanks in the name of all contributors both for the financial support and for the hospitality granted

Explanatory Item Response Models Paul de Boeck, Mark Wilson, 2013-03-09 This edited volume gives a new and integrated introduction to item response models predominantly used in measurement applications in psychology education and other social science areas from the viewpoint of the statistical theory of generalized linear and nonlinear mixed models Moreover this new framework allows the domain of item response models to be coordinated and broadened to emphasize their explanatory uses beyond their standard descriptive uses The basic explanatory principle is that item responses can be modeled as a function of predictors of various kinds The predictors can be characteristics of items of persons and of combinations of persons and items they can be observed or latent of either items or persons and they can be latent continuous or latent categorical Thus a broad range of models can be generated including a wide range of extant item response models as well as some new ones Within this range models with explanatory predictors are given special attention but we also discuss descriptive models Note that the item responses that we are referring to are not just the traditional test data but are broadly conceived as categorical data from a repeated observations design Hence data from studies with repeated observations experimental designs or with longitudinal designs may also be modeled The intended audience for this volume is rather broad
